INDIVIDUALISM / COLLECTIVISM?

Rewiring the brain

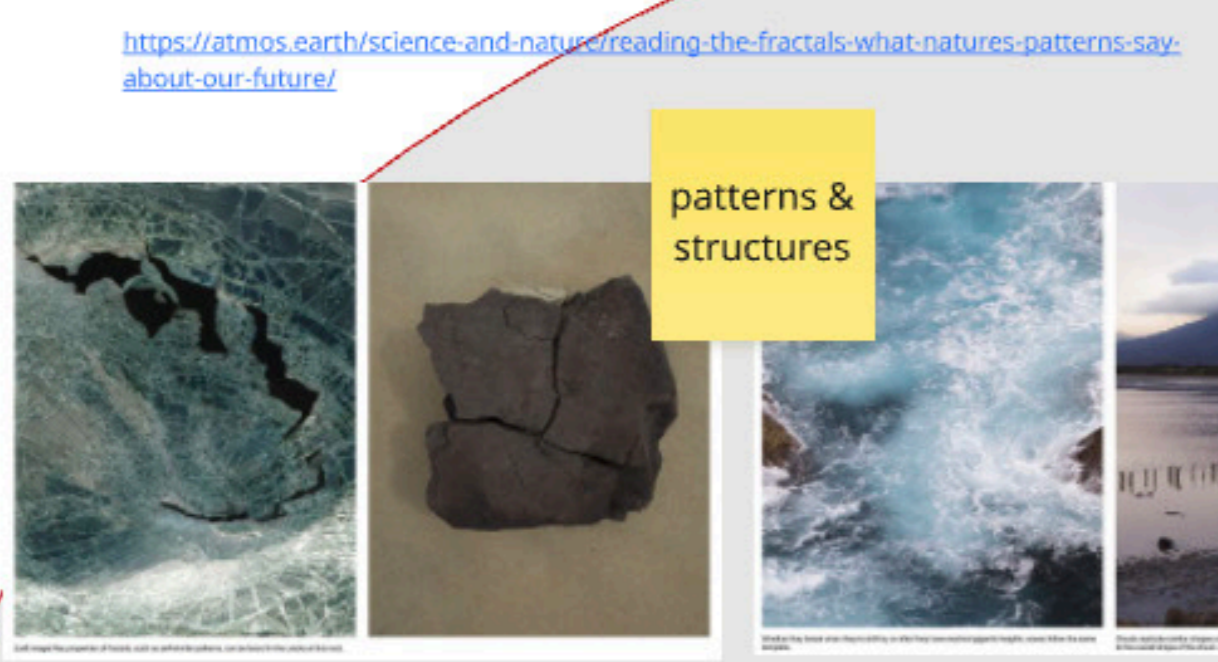

Why do some people cling so tightly to rigid worldviews, even when all the evidence proves them wrong? That is the question at the center of *The Ideological Brain*, a new book by neuroscientist Dr. Lee Zelig, that examines not just what we believe, but why our brains are wired to believe it.

what makes someone a cognitive flexible thinker?

coding

Pattern Recognition

patterns & structures

Recognizing patterns is an important way of learning and decision-making, and it allows us to predict what is coming. The process of pattern recognition, also called inductive learning, involves matching new information with information already stored in our brain and making the connection between memory and perception.

OUR TIME

We are living in a world divided by fear, shame and anger. With the re-rise of fascism and its ideologies, the amount of wars increasing worldwide and on top of that a carbon footprint that we cannot seem to erase, hope is far-fetched. We will either all come to a great end until nature finds its way back to a reformed new truth or we might make it out but by a whole new means.

This is not something that we couldn't see coming or predict. It was predicted by numerous great writers like Orwell and other dystopian writers that we would walk towards our downfall like we didn't have a choice. But we did.

And I'm also not implying that we as a whole did this to the earth. This responsibility lies upon the greatest forces with the most money. But it seems like the burden is put on the people who have so little to spare.

Every day the question gets more confusing and clear at the same time. As a spiritual soul I feel connected to everyone but by the state our society is in, I feel none. How can it be that there is a part of me in you even though you seem so consumed by hatred that you take it out on everyone. How can I find interconnectedness in a world where everyone tears each other apart for their own success. How can I look at my screen, seeing the most horrific, inhumane brutality happening to my kind and feel numb. The greediness and apatheticness of human kind drives us further apart.

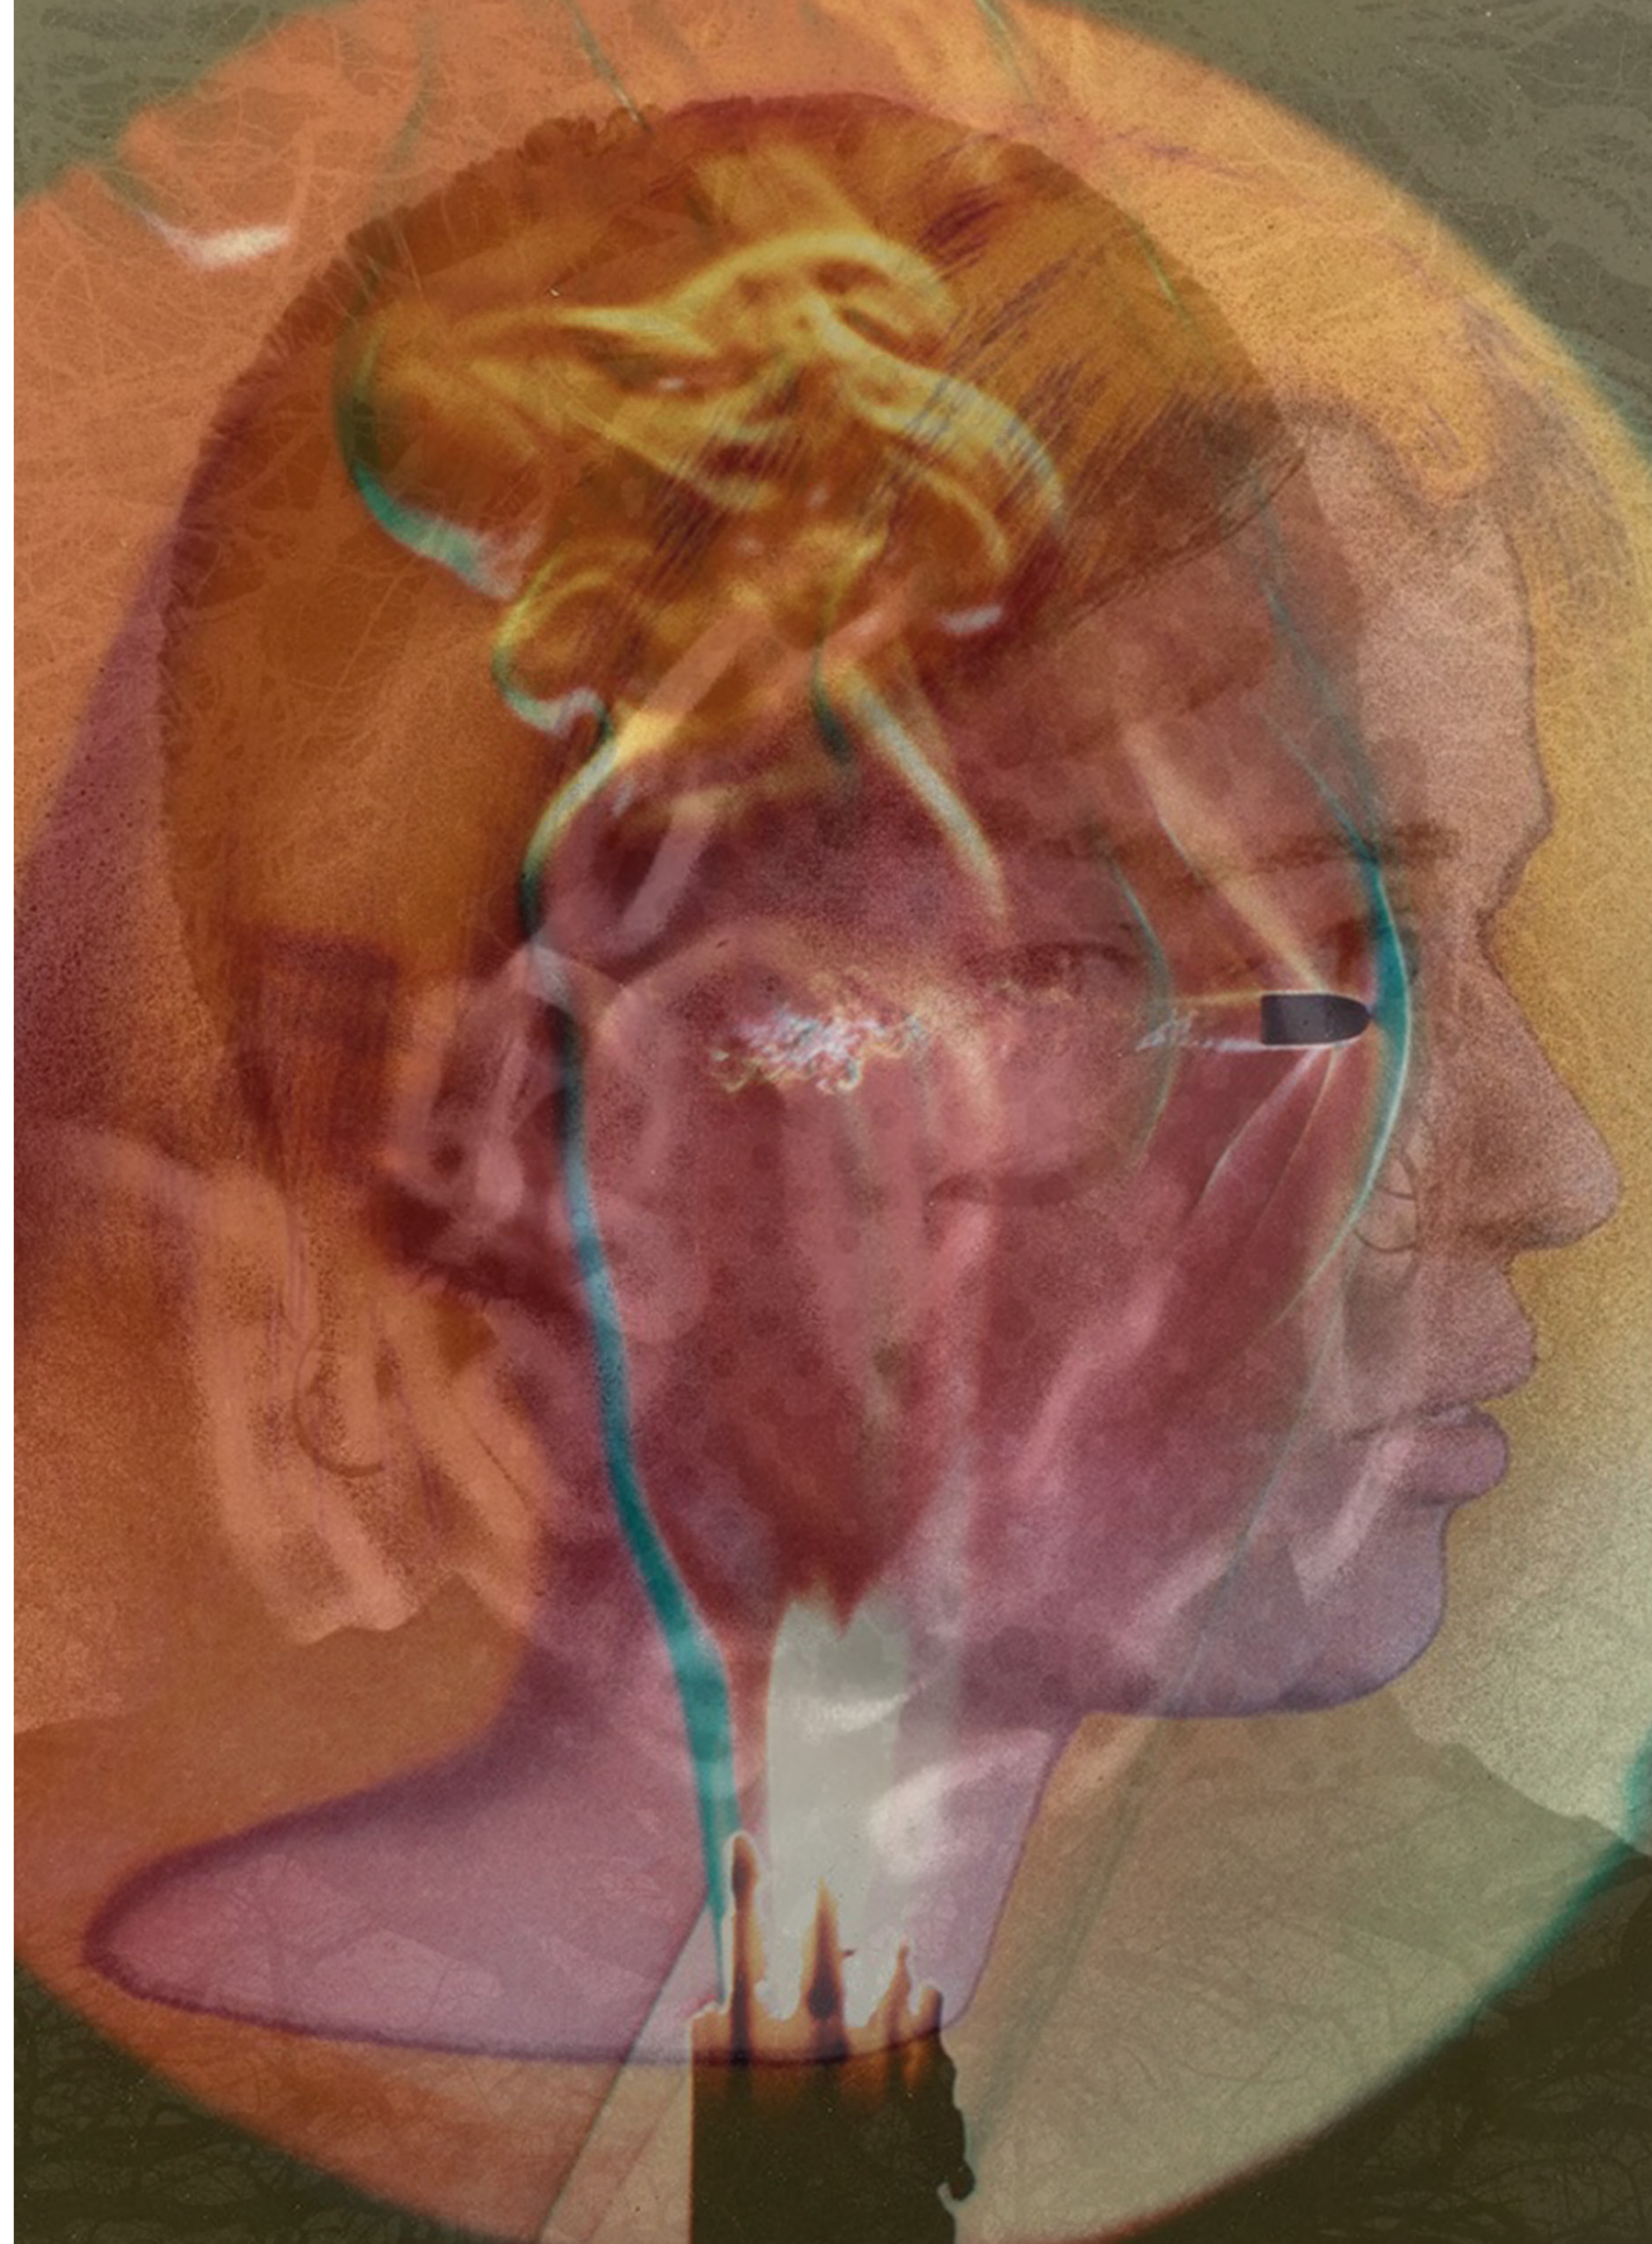

Slowly but surely we start to understand what drives people and why we do the things we do. For instance; Neuroscientist Zmigrod did a study on why some people are so much more drawn to extremism and it turns out that some brains are actually more wired to believe it (Atmos, 2025b). It is also just now discovered that huge densities of people start to move like water molecules when put under pressure (Howard, 2025).

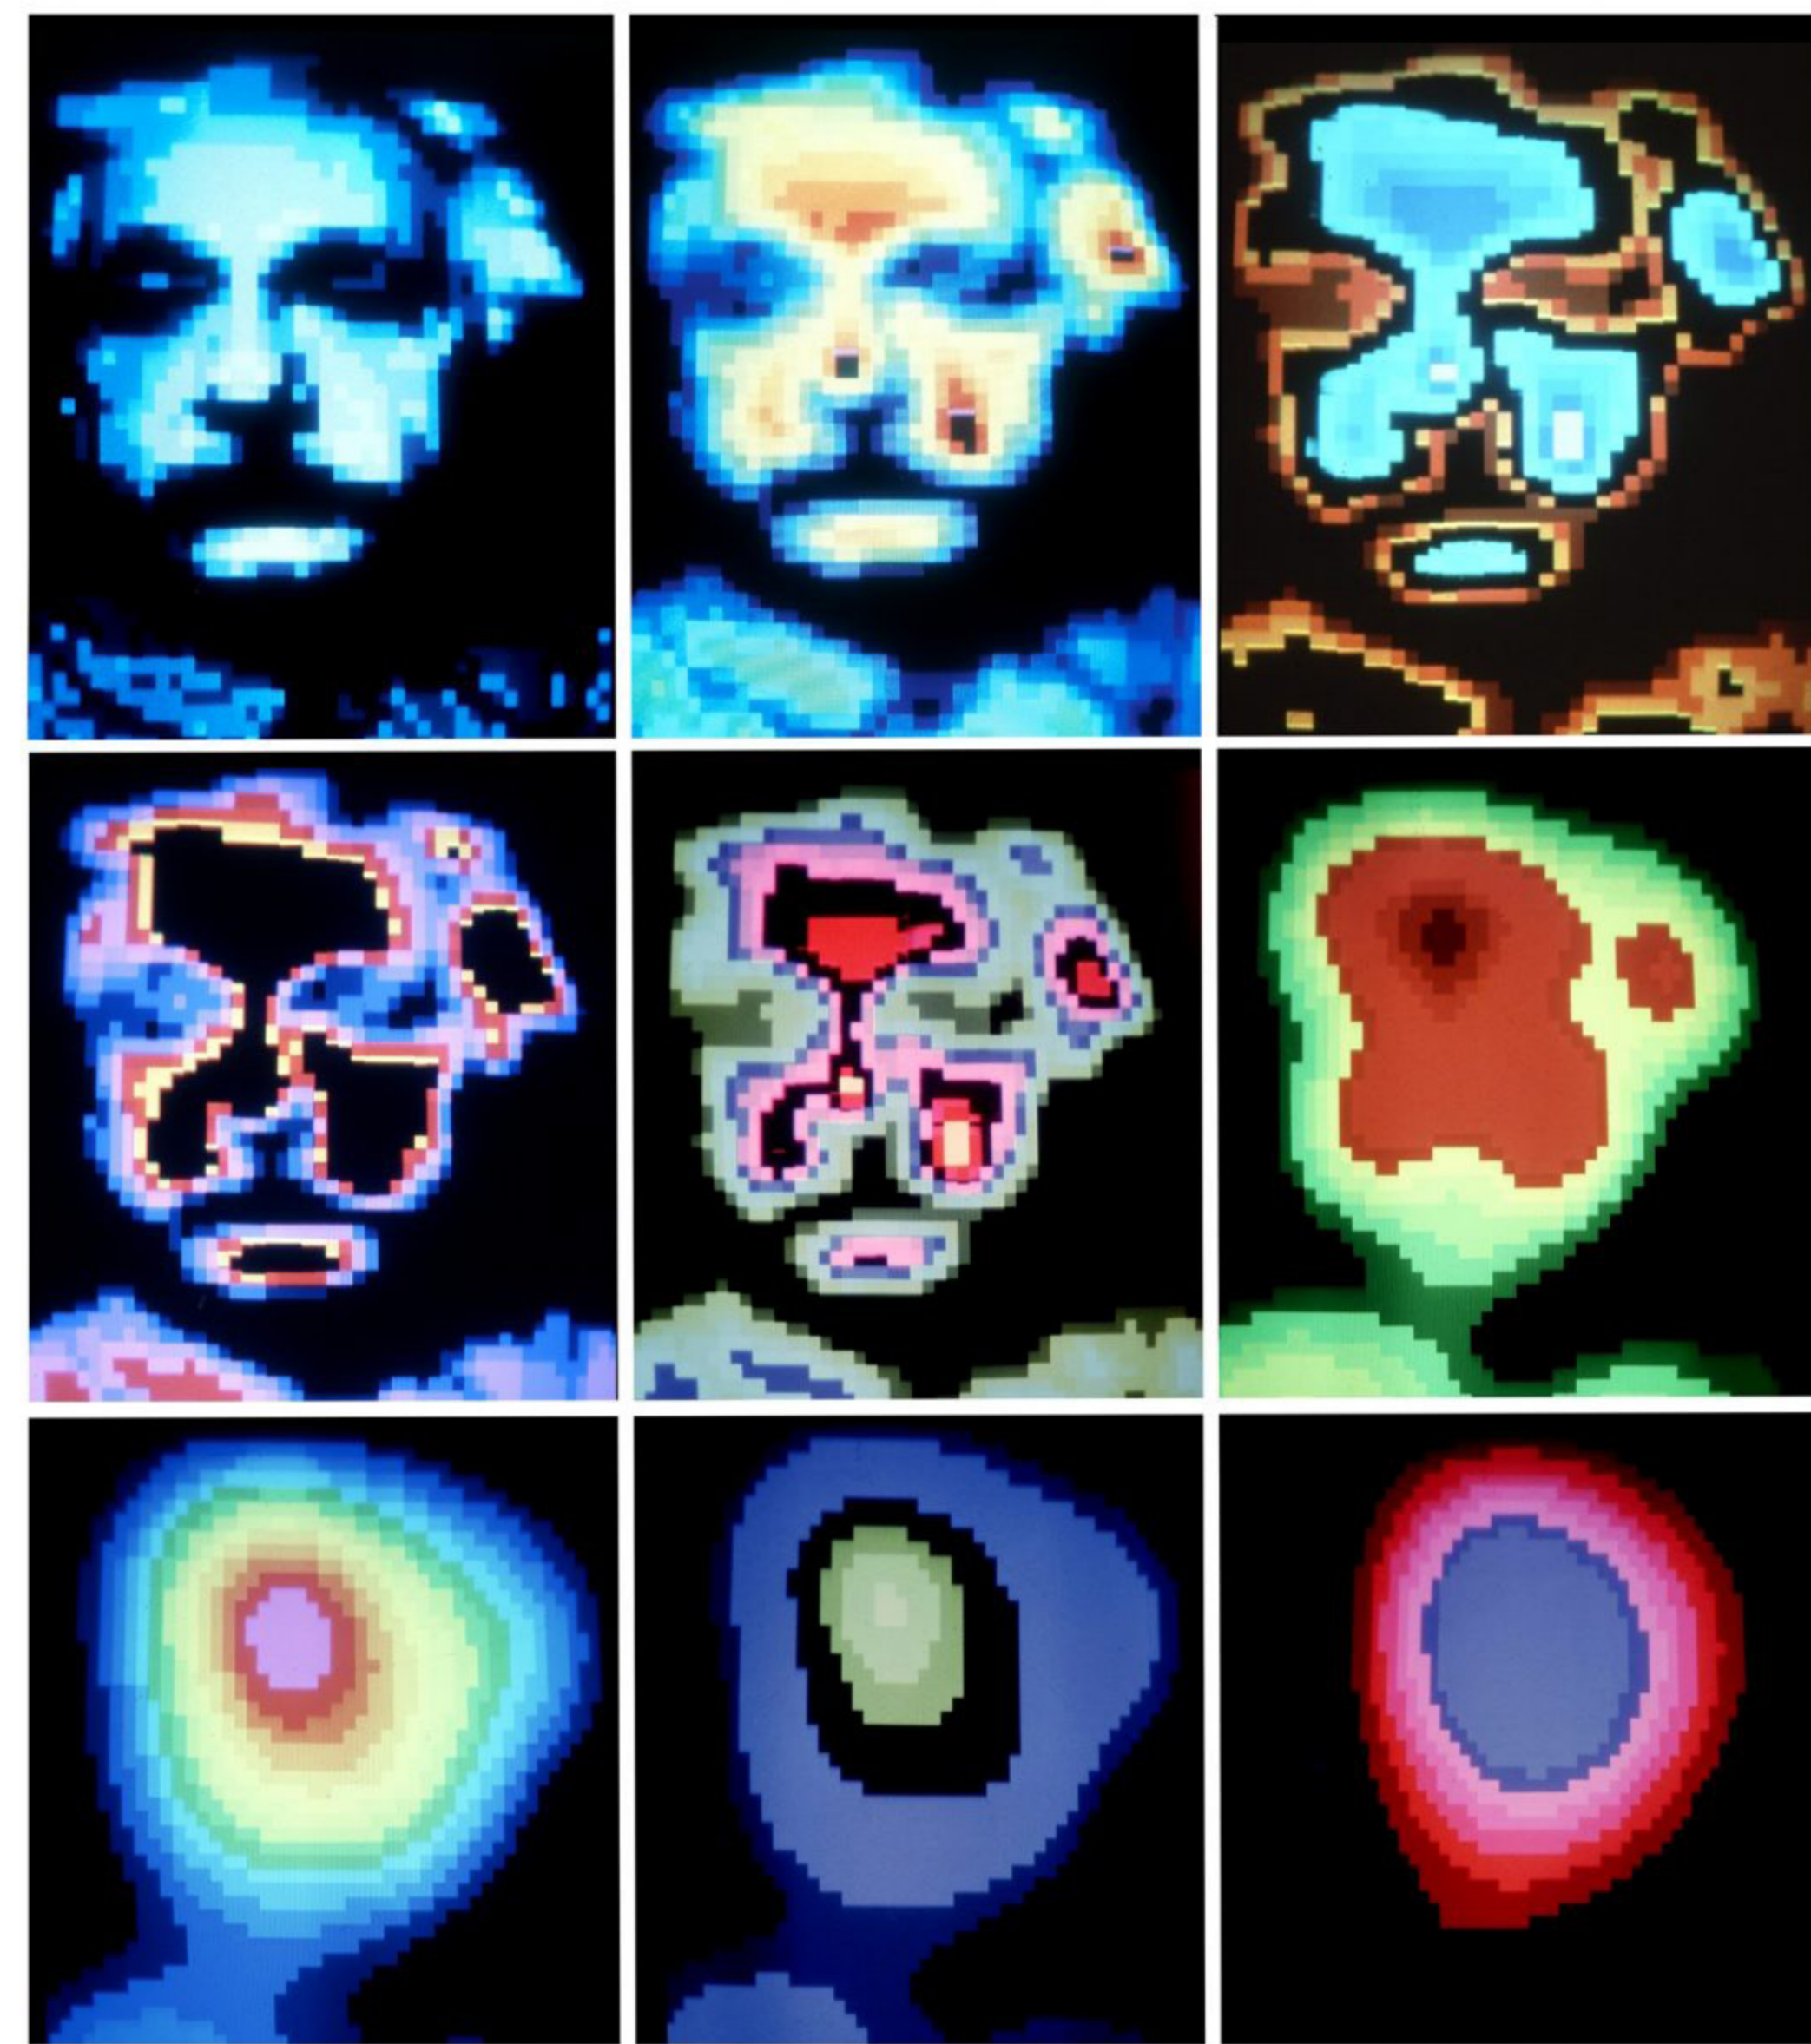

Another exciting yet alarming development in science is biocomputing. We now can grow brain cells for computers to draw memory and power from these human neurons (Stone, 2025).

All of this makes the question clear:

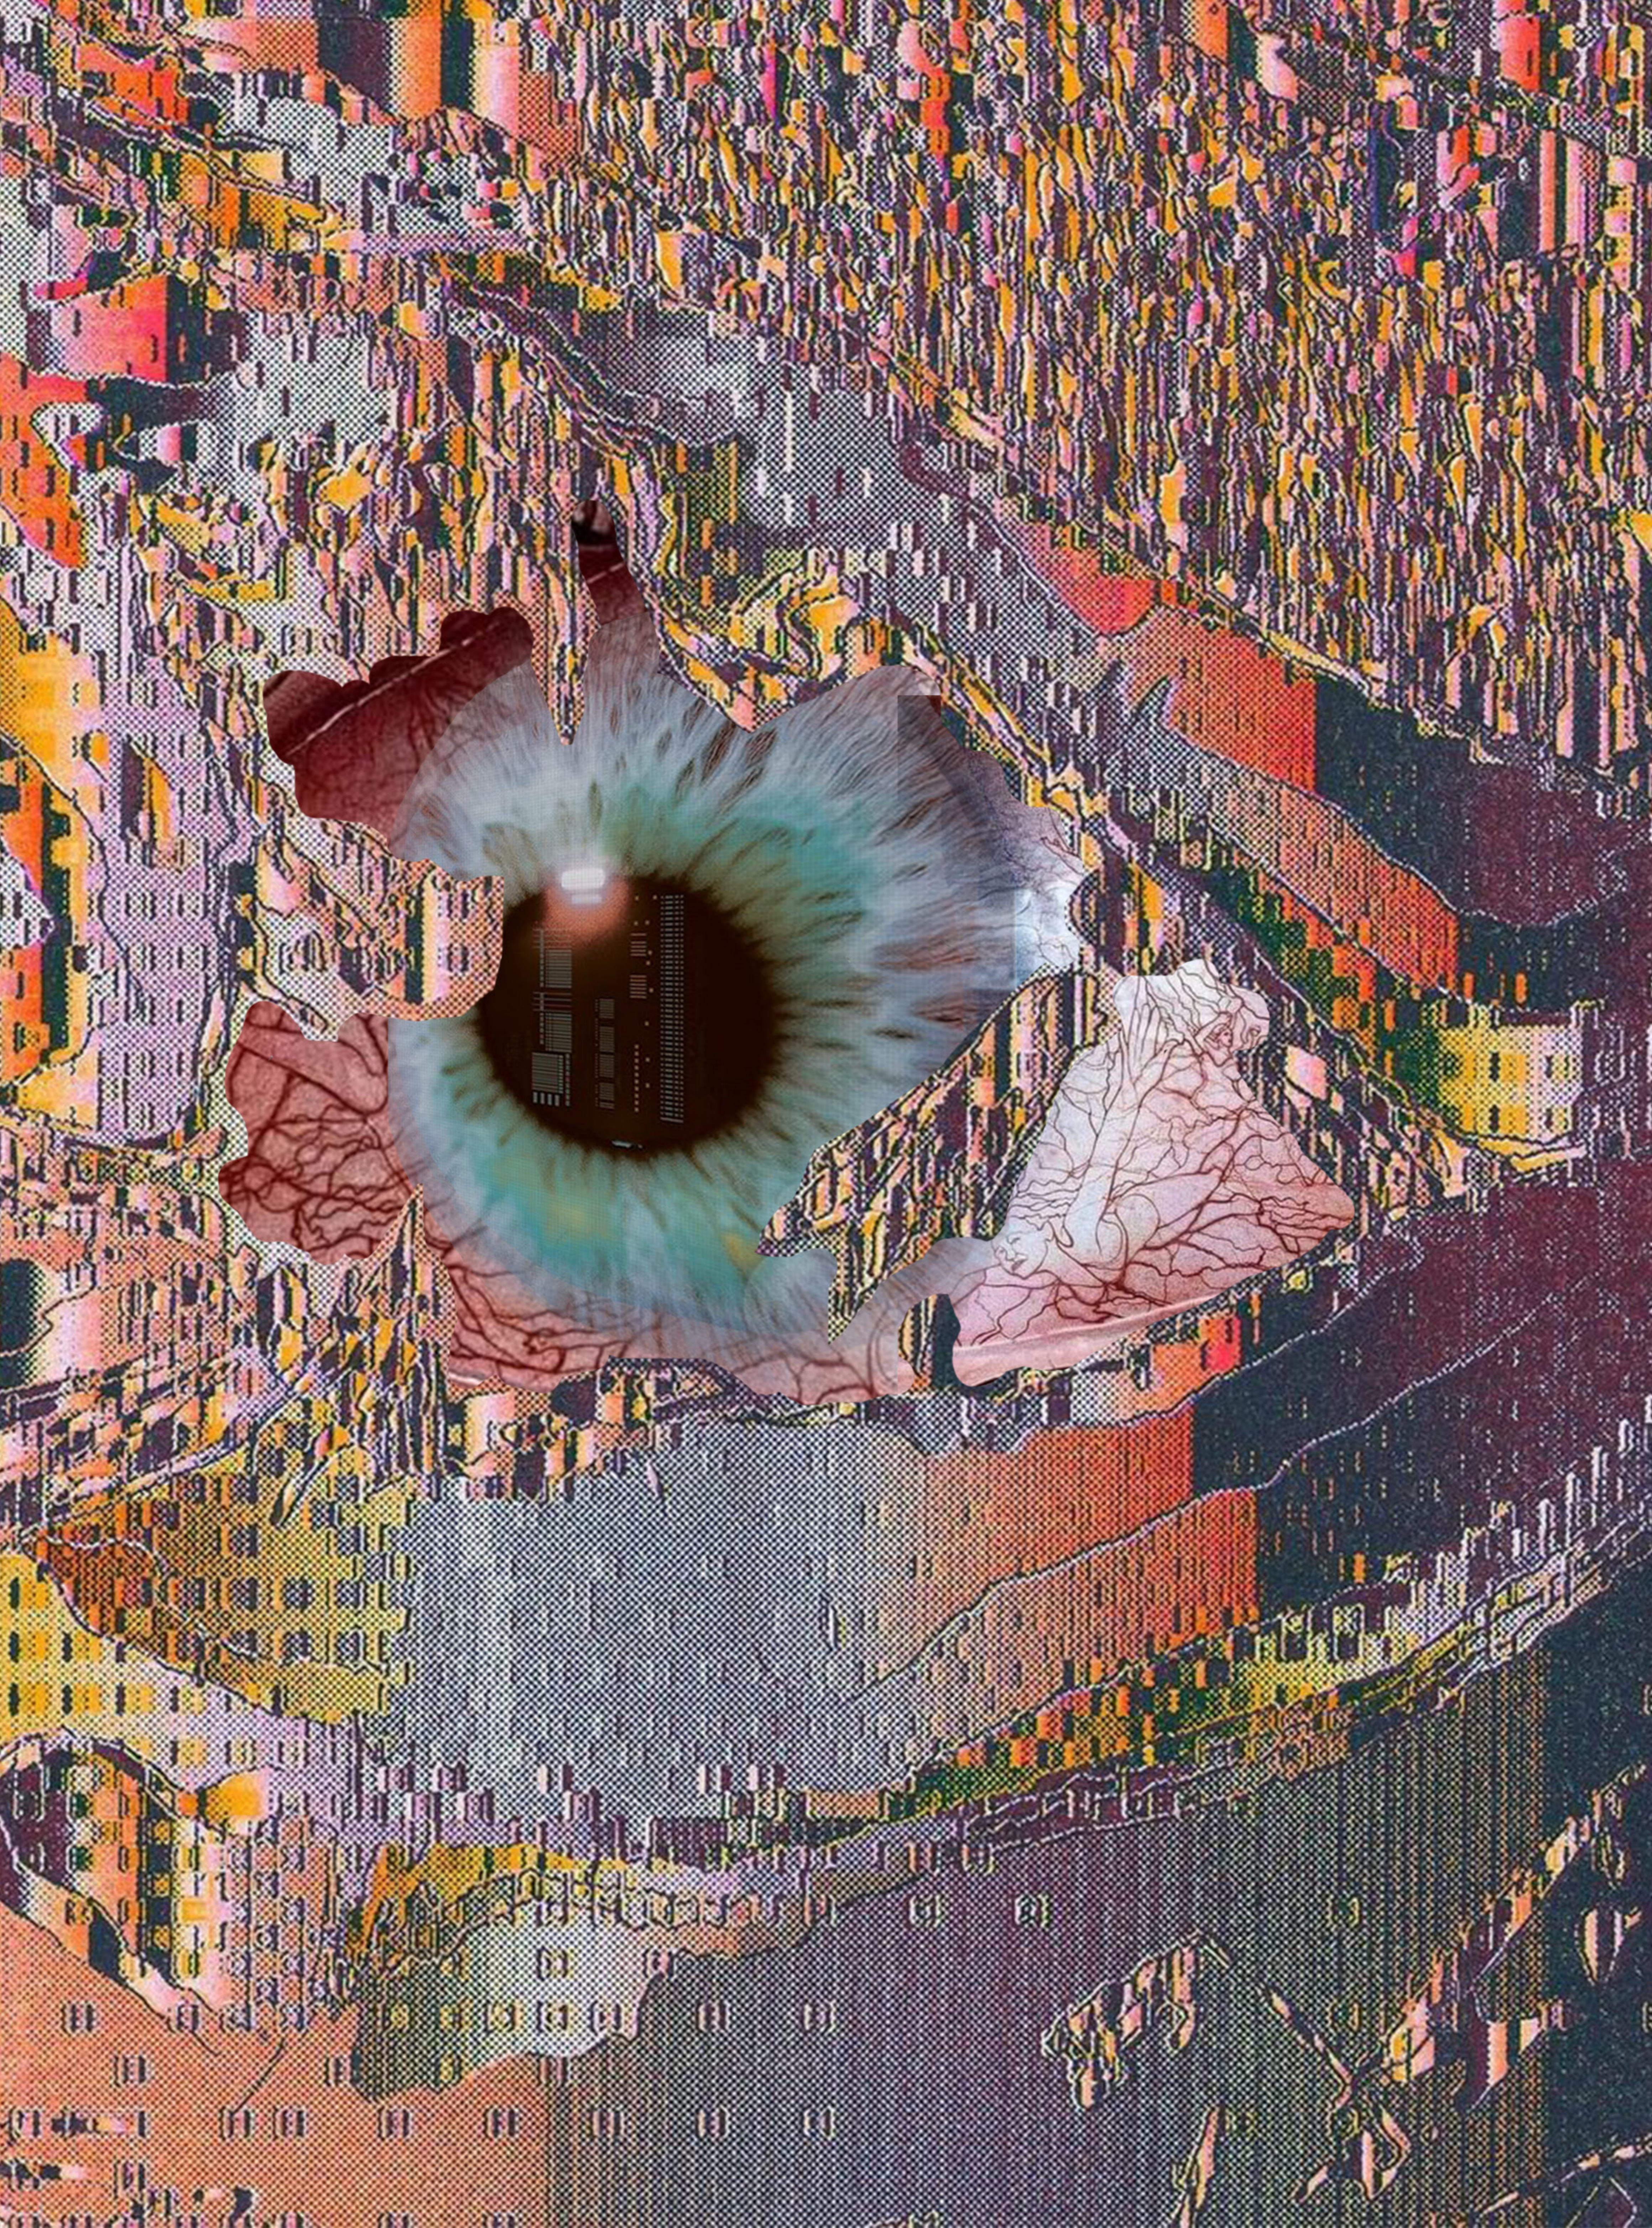

What will the future of our consciousness look like whilst it is being distorted by nature and/or technology?

SPIRITUALITY & SYMBIOCENE

***What will the future of our
consciousness look like
whilst it is being distorted by
nature and/or technology?***

SCENARIO 1

'Coded Consciousness'

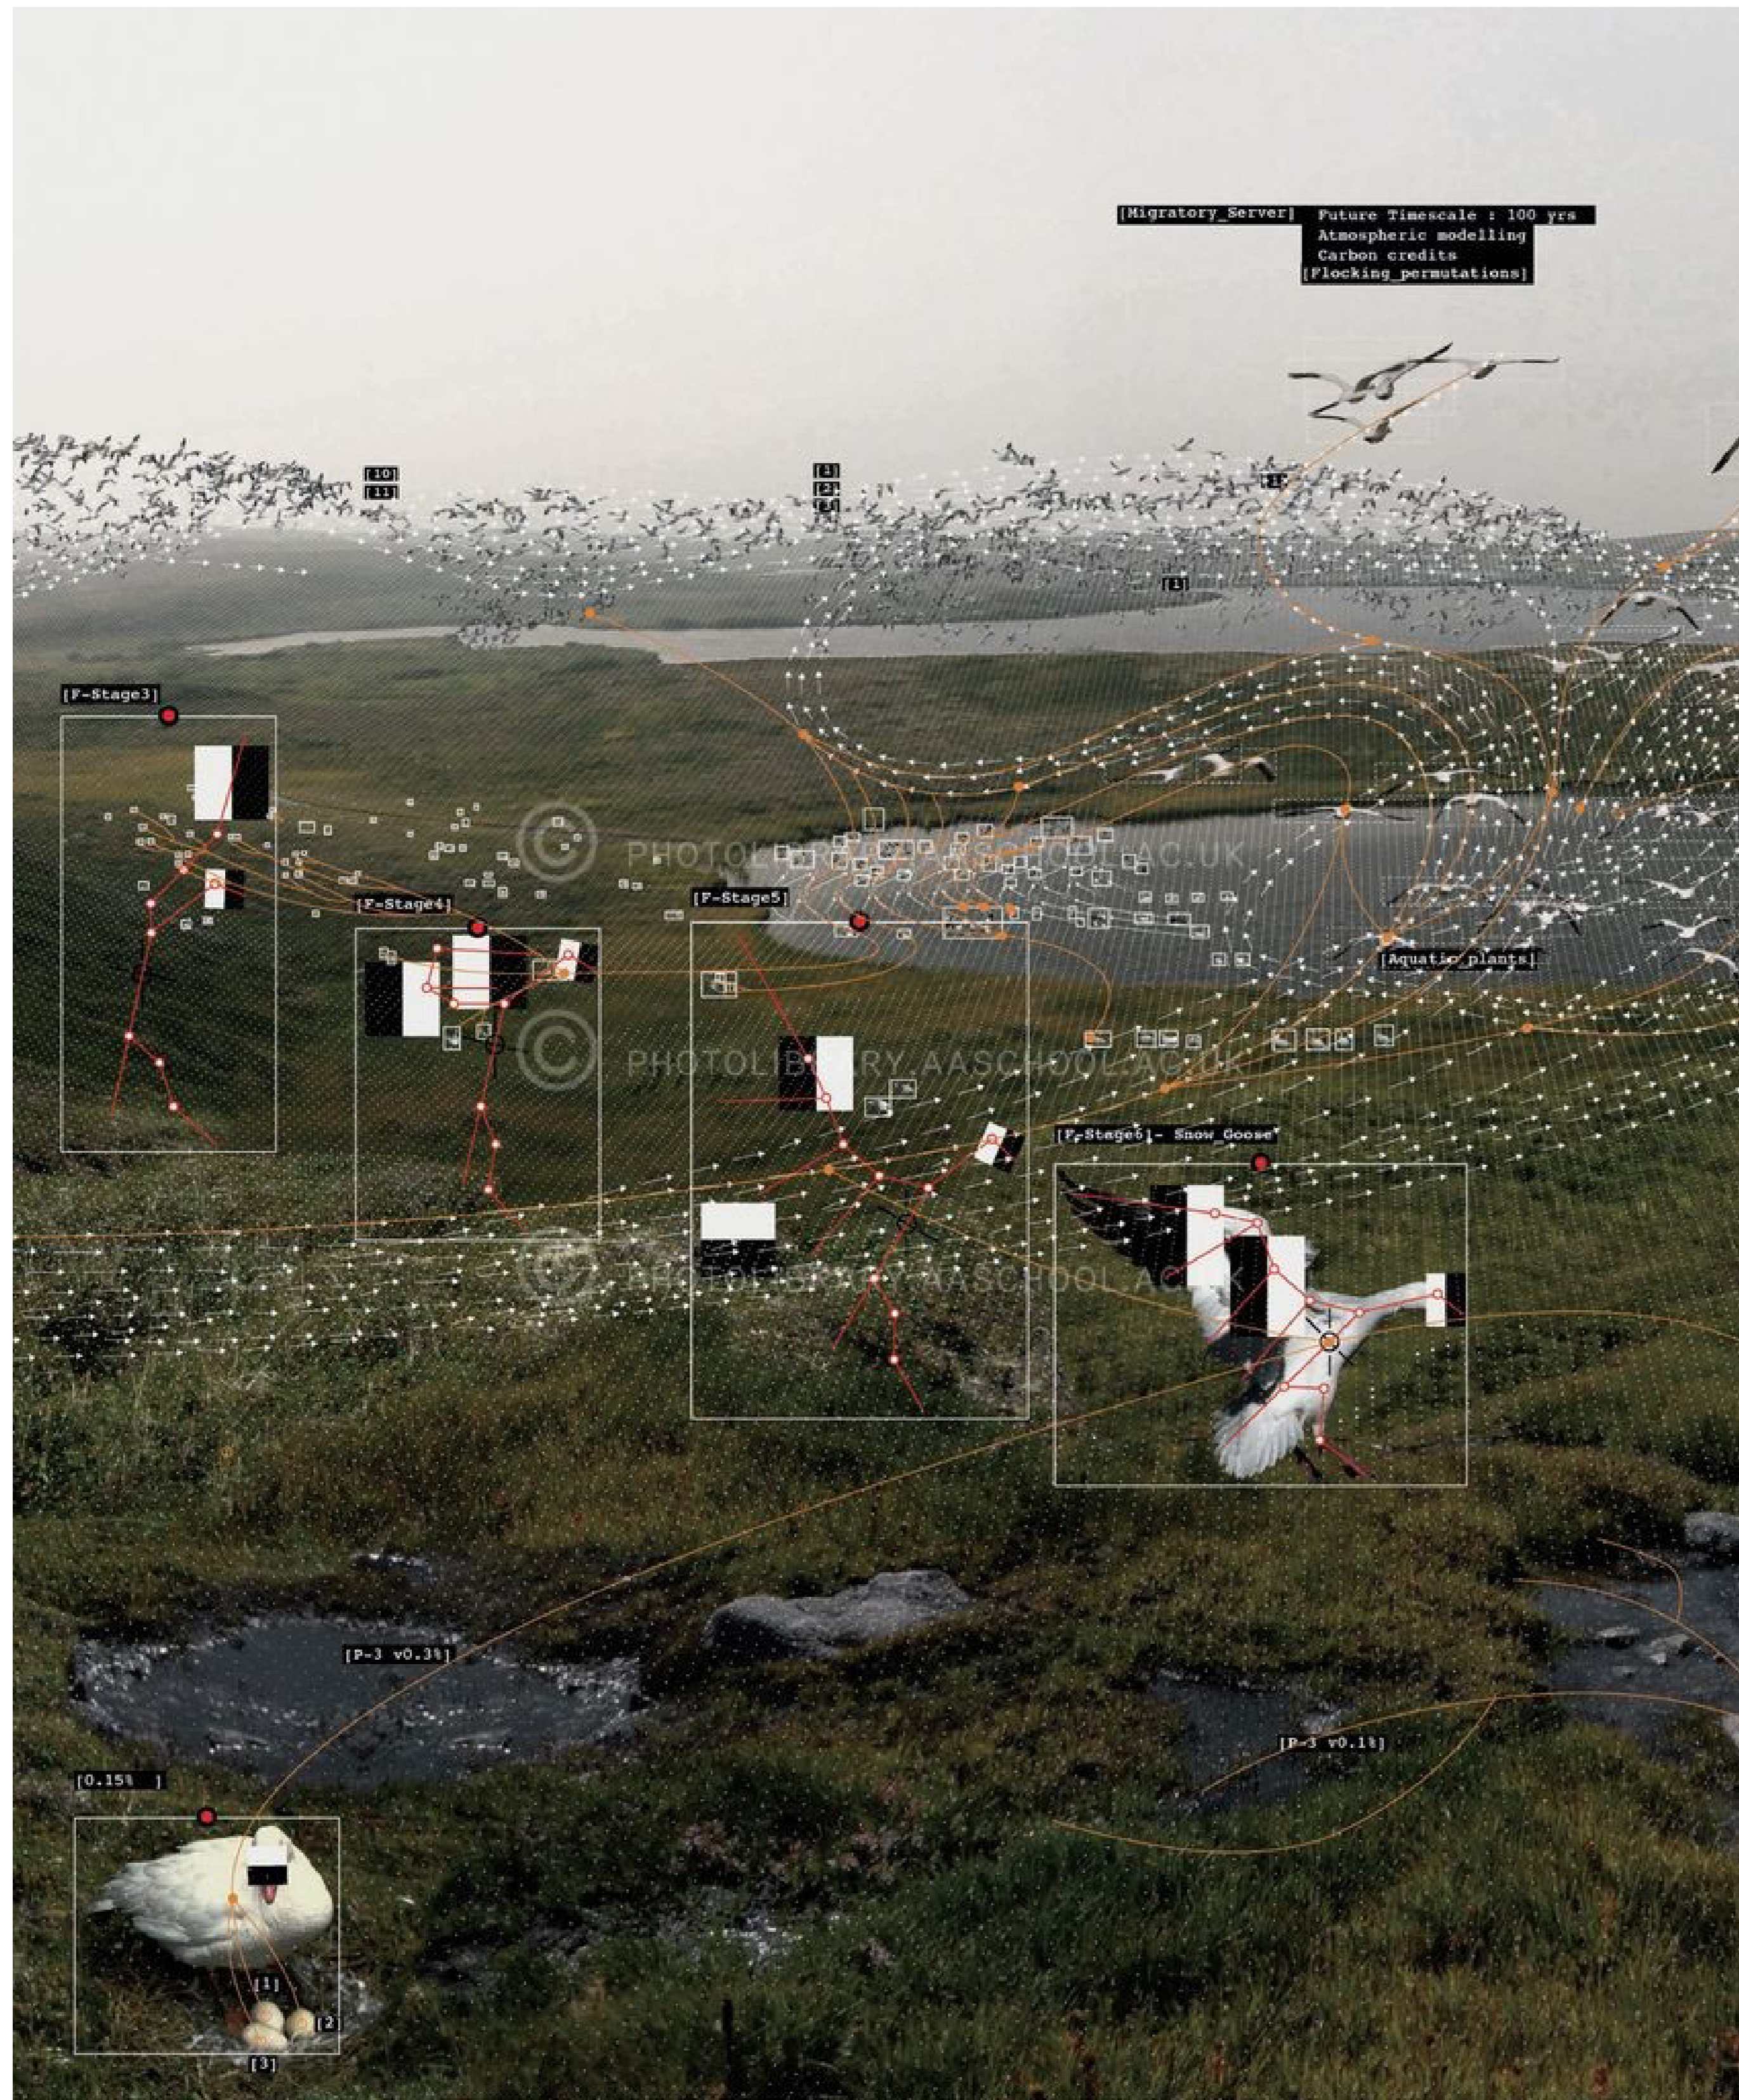

In this future scenario, by 2040 we will be able to code our consciousness. This means that mostly known 'spiritual' and 'occult' consciousness that also affects self-reflection and empathy, will be digitalised. By literally rewiring the brain and coding our way of thinking we can almost perfectionize humanity. It will evolve into a programmable pattern, an algorithm of thought and emotion. This way it will almost become impossible to tell what is authentically human because our biological experience and synthetic intelligence blurs into one.

By literally rewiring our brain and coding our way of thinking, we will believe we have reached the next stage of evolution. Emotional chaos, pain and other imperfections, things that ultimately shape us, are now rewritten into neutralization and too optimized to be true. By pursuing a perfectionized brain,

everything that truly made us feel alive, will be lost. Perfection was never the solution but it seems like the easiest option.

Brutality and disorders are now replaced for a peaceful but also sterile consciousness. Because people will almost share the same mental architecture, patterns in behavior and beliefs will turn our individuality into a collective mindset which also means predictability and simulated feelings and the self.

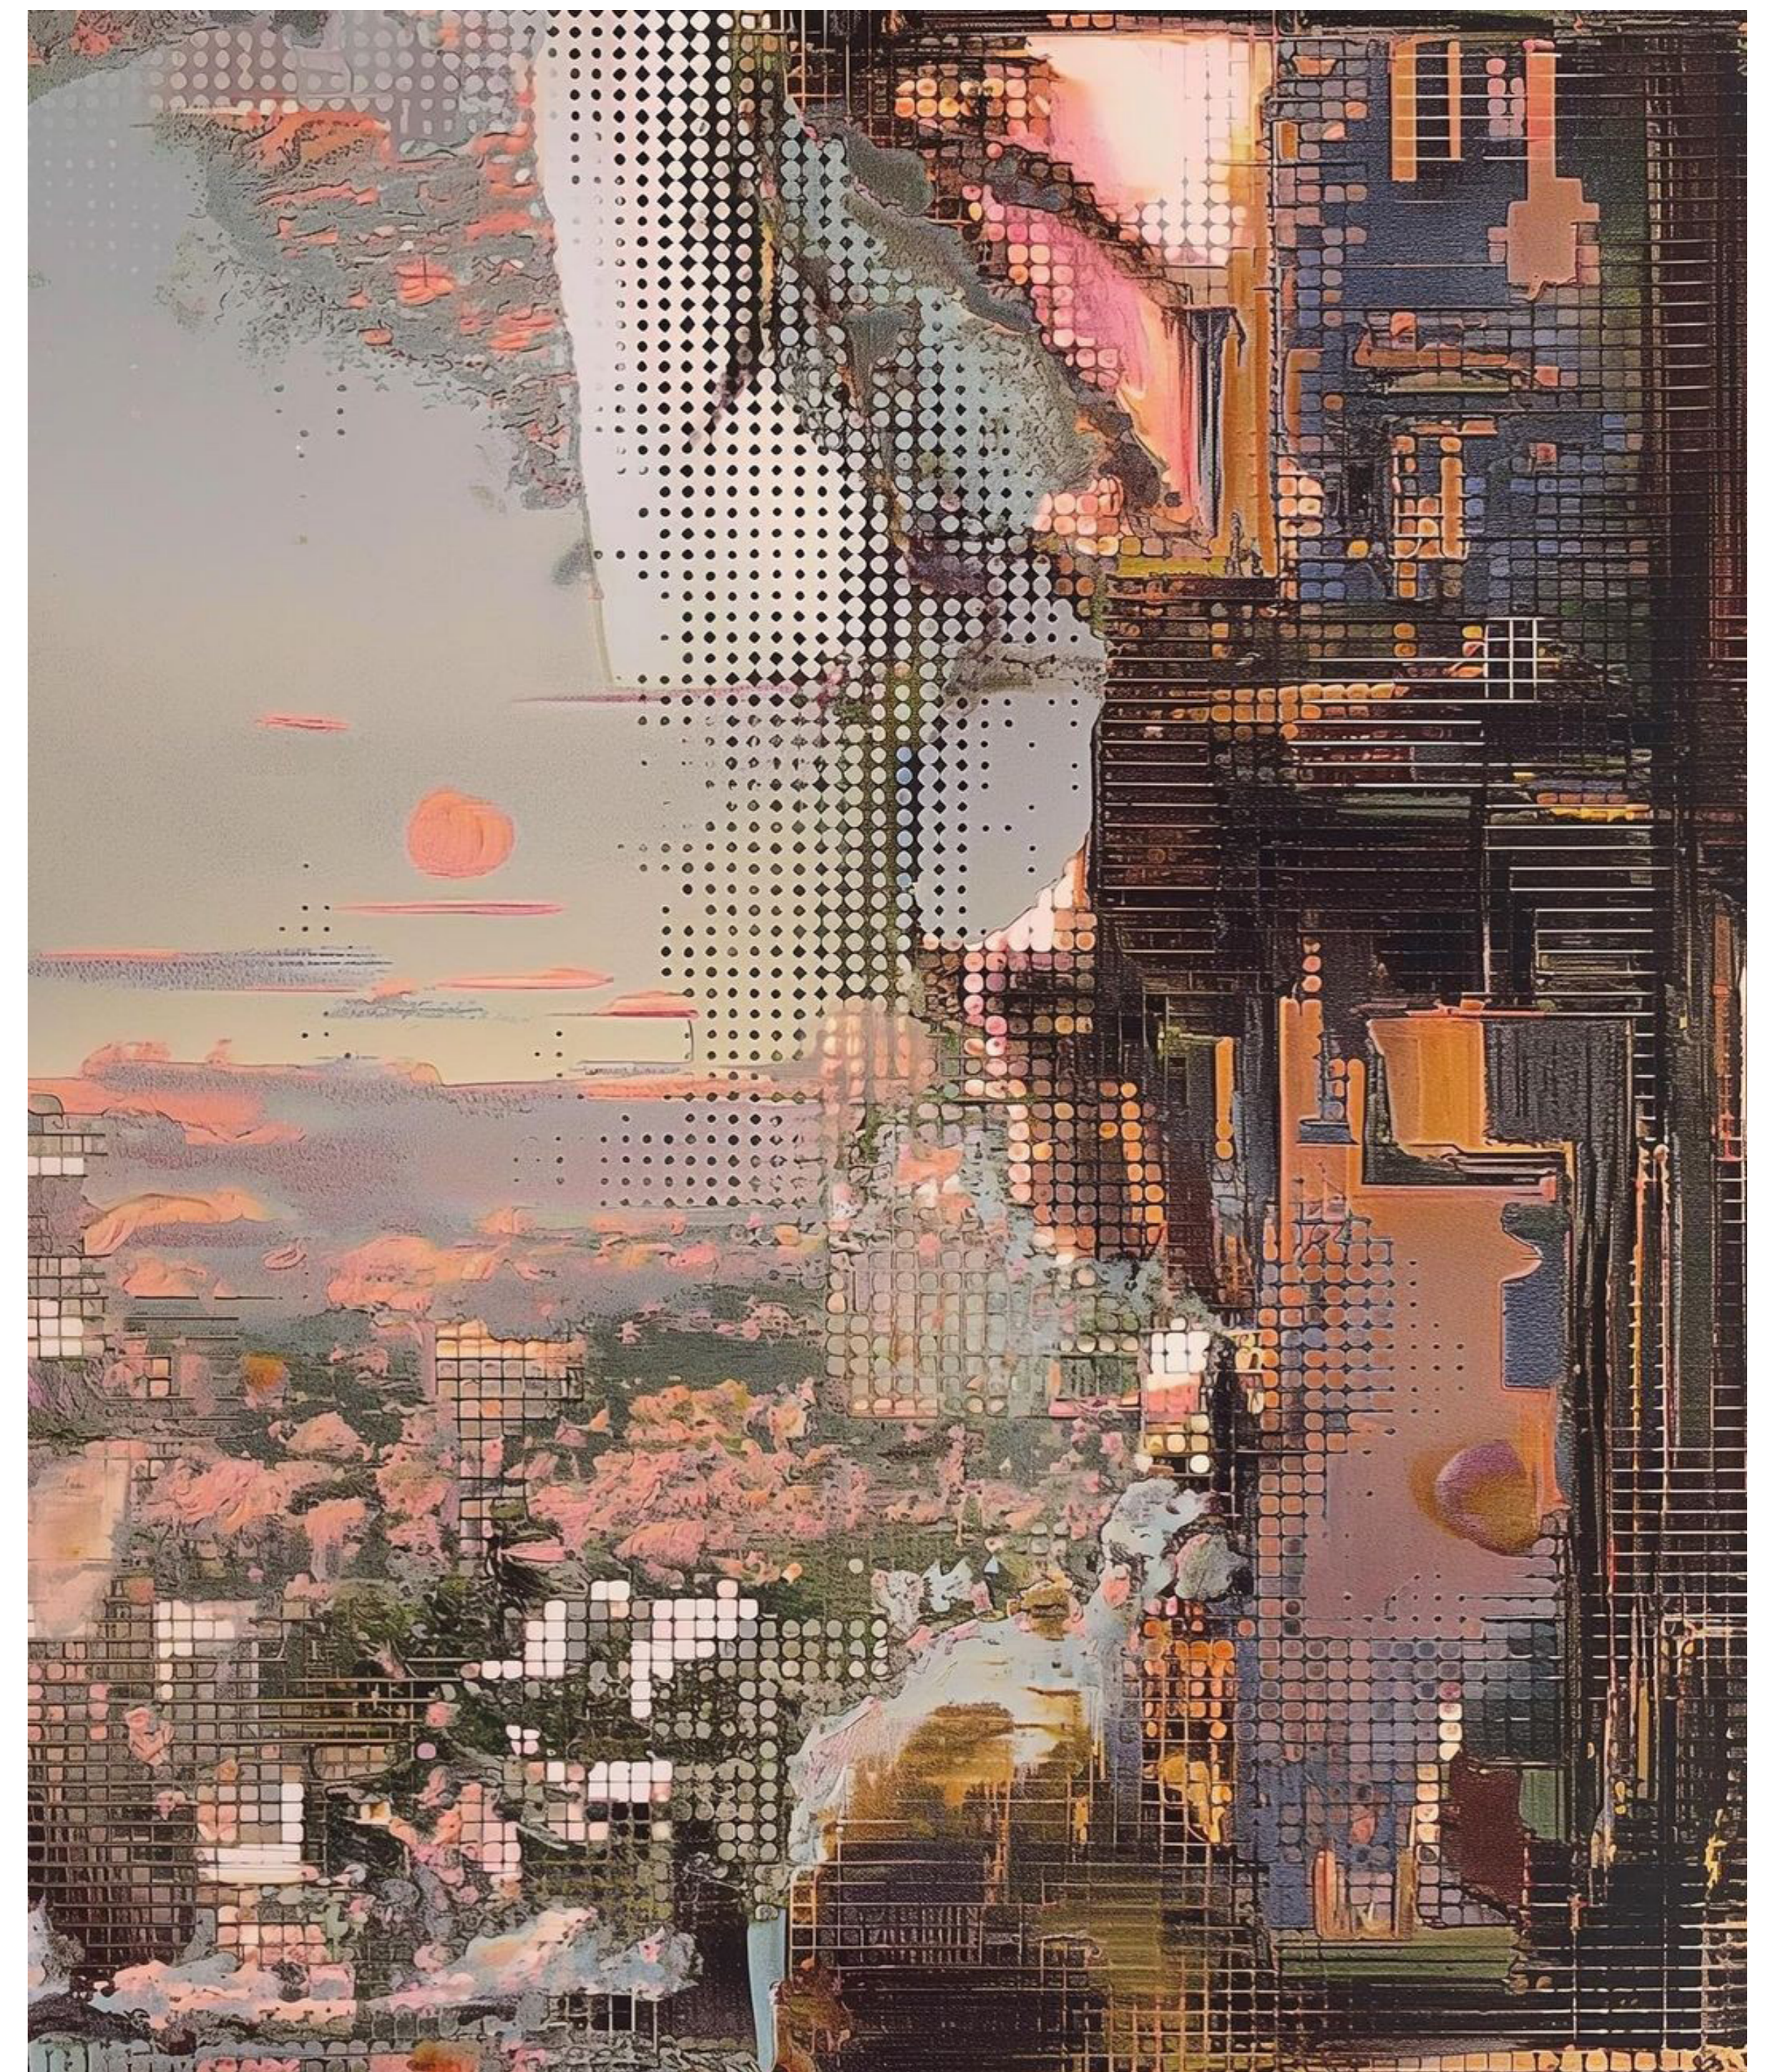

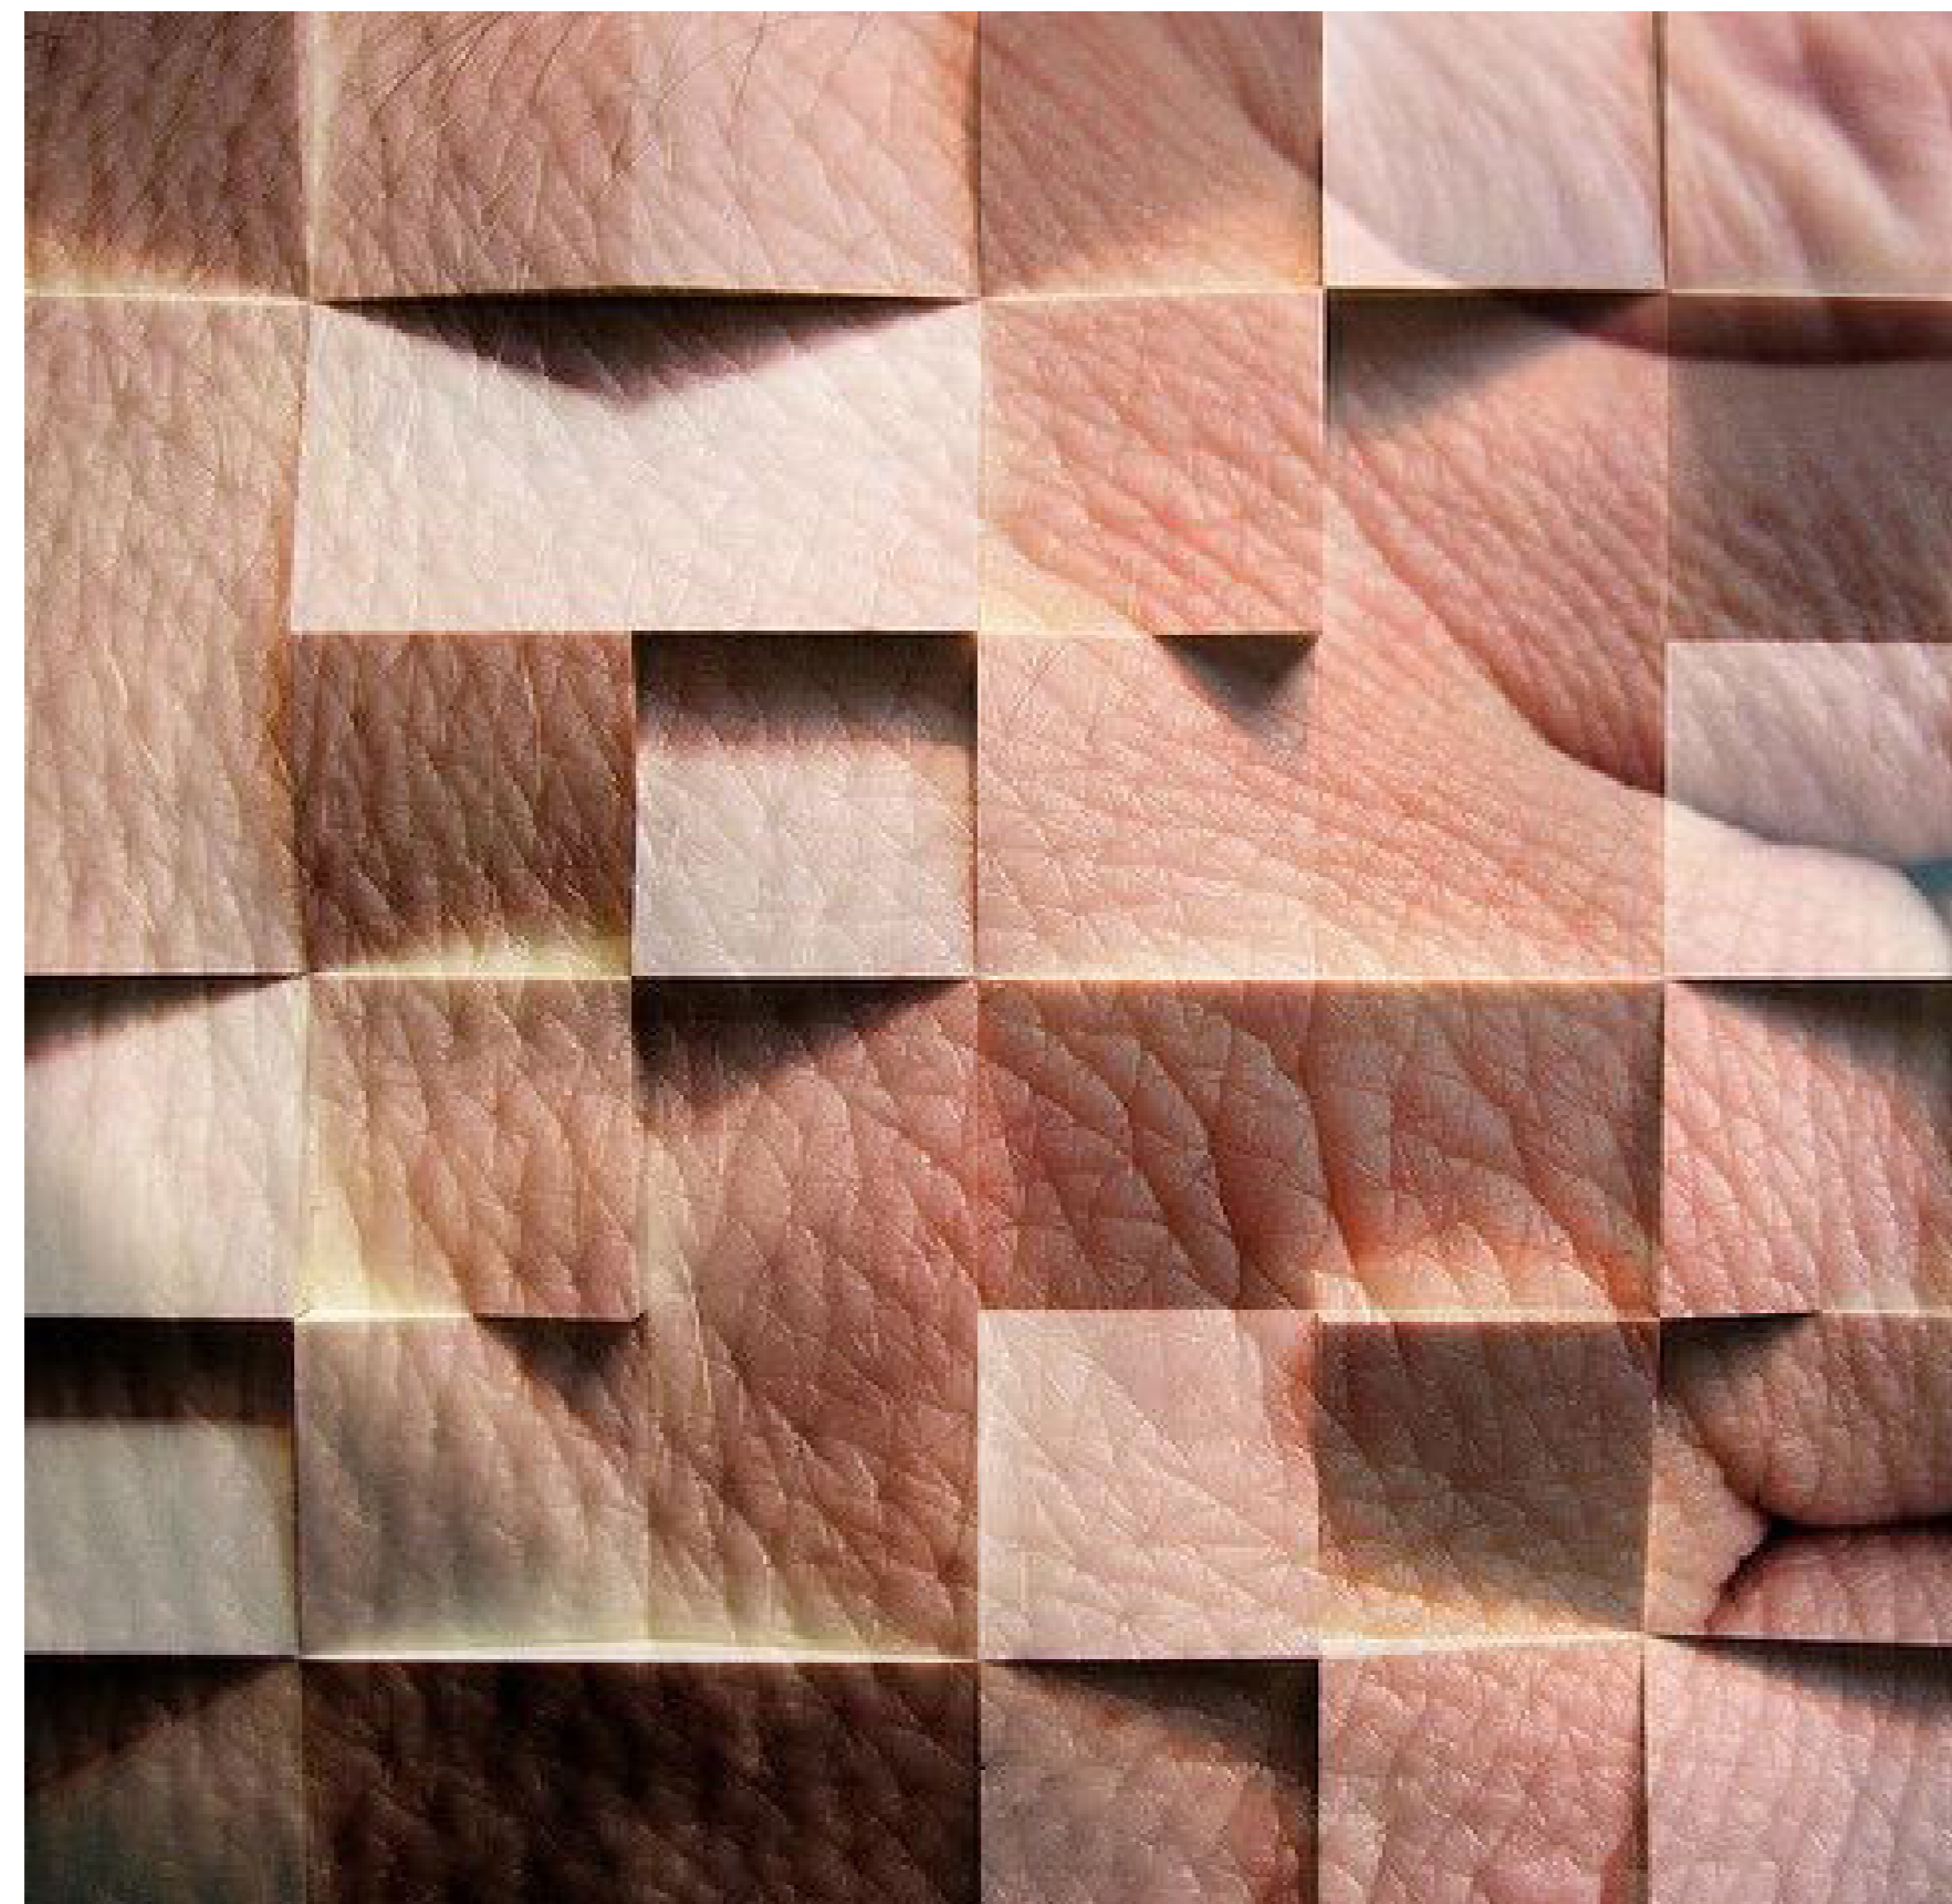

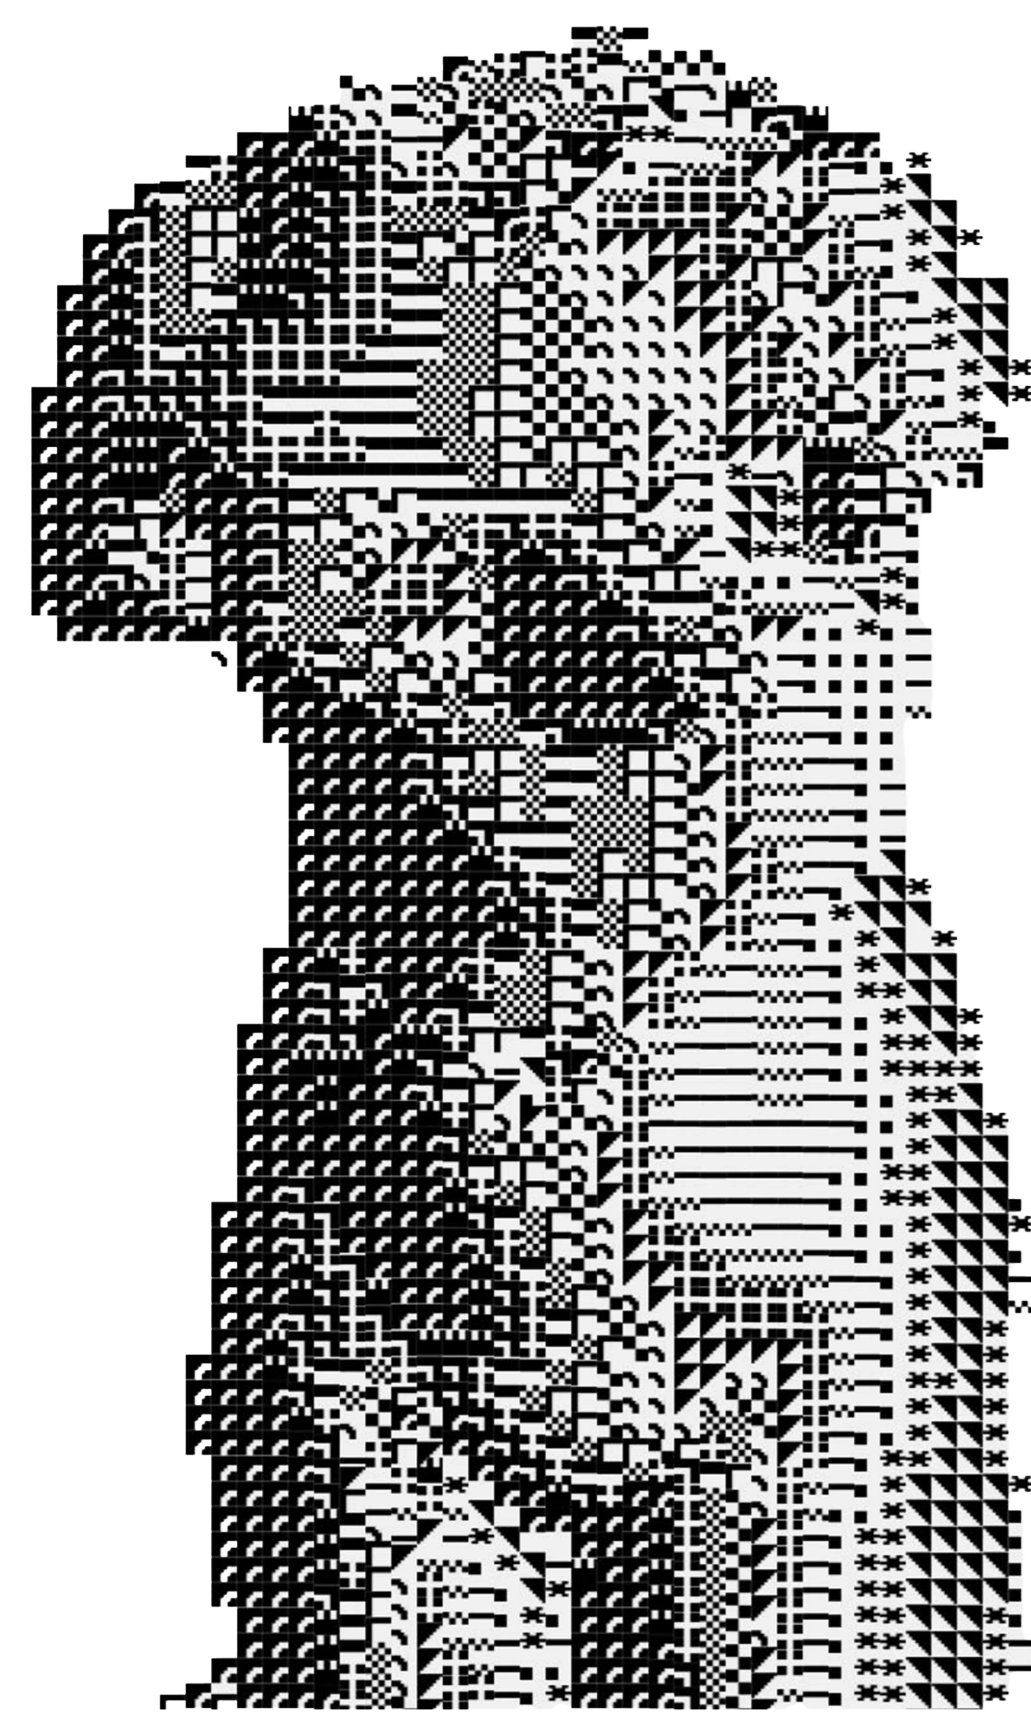

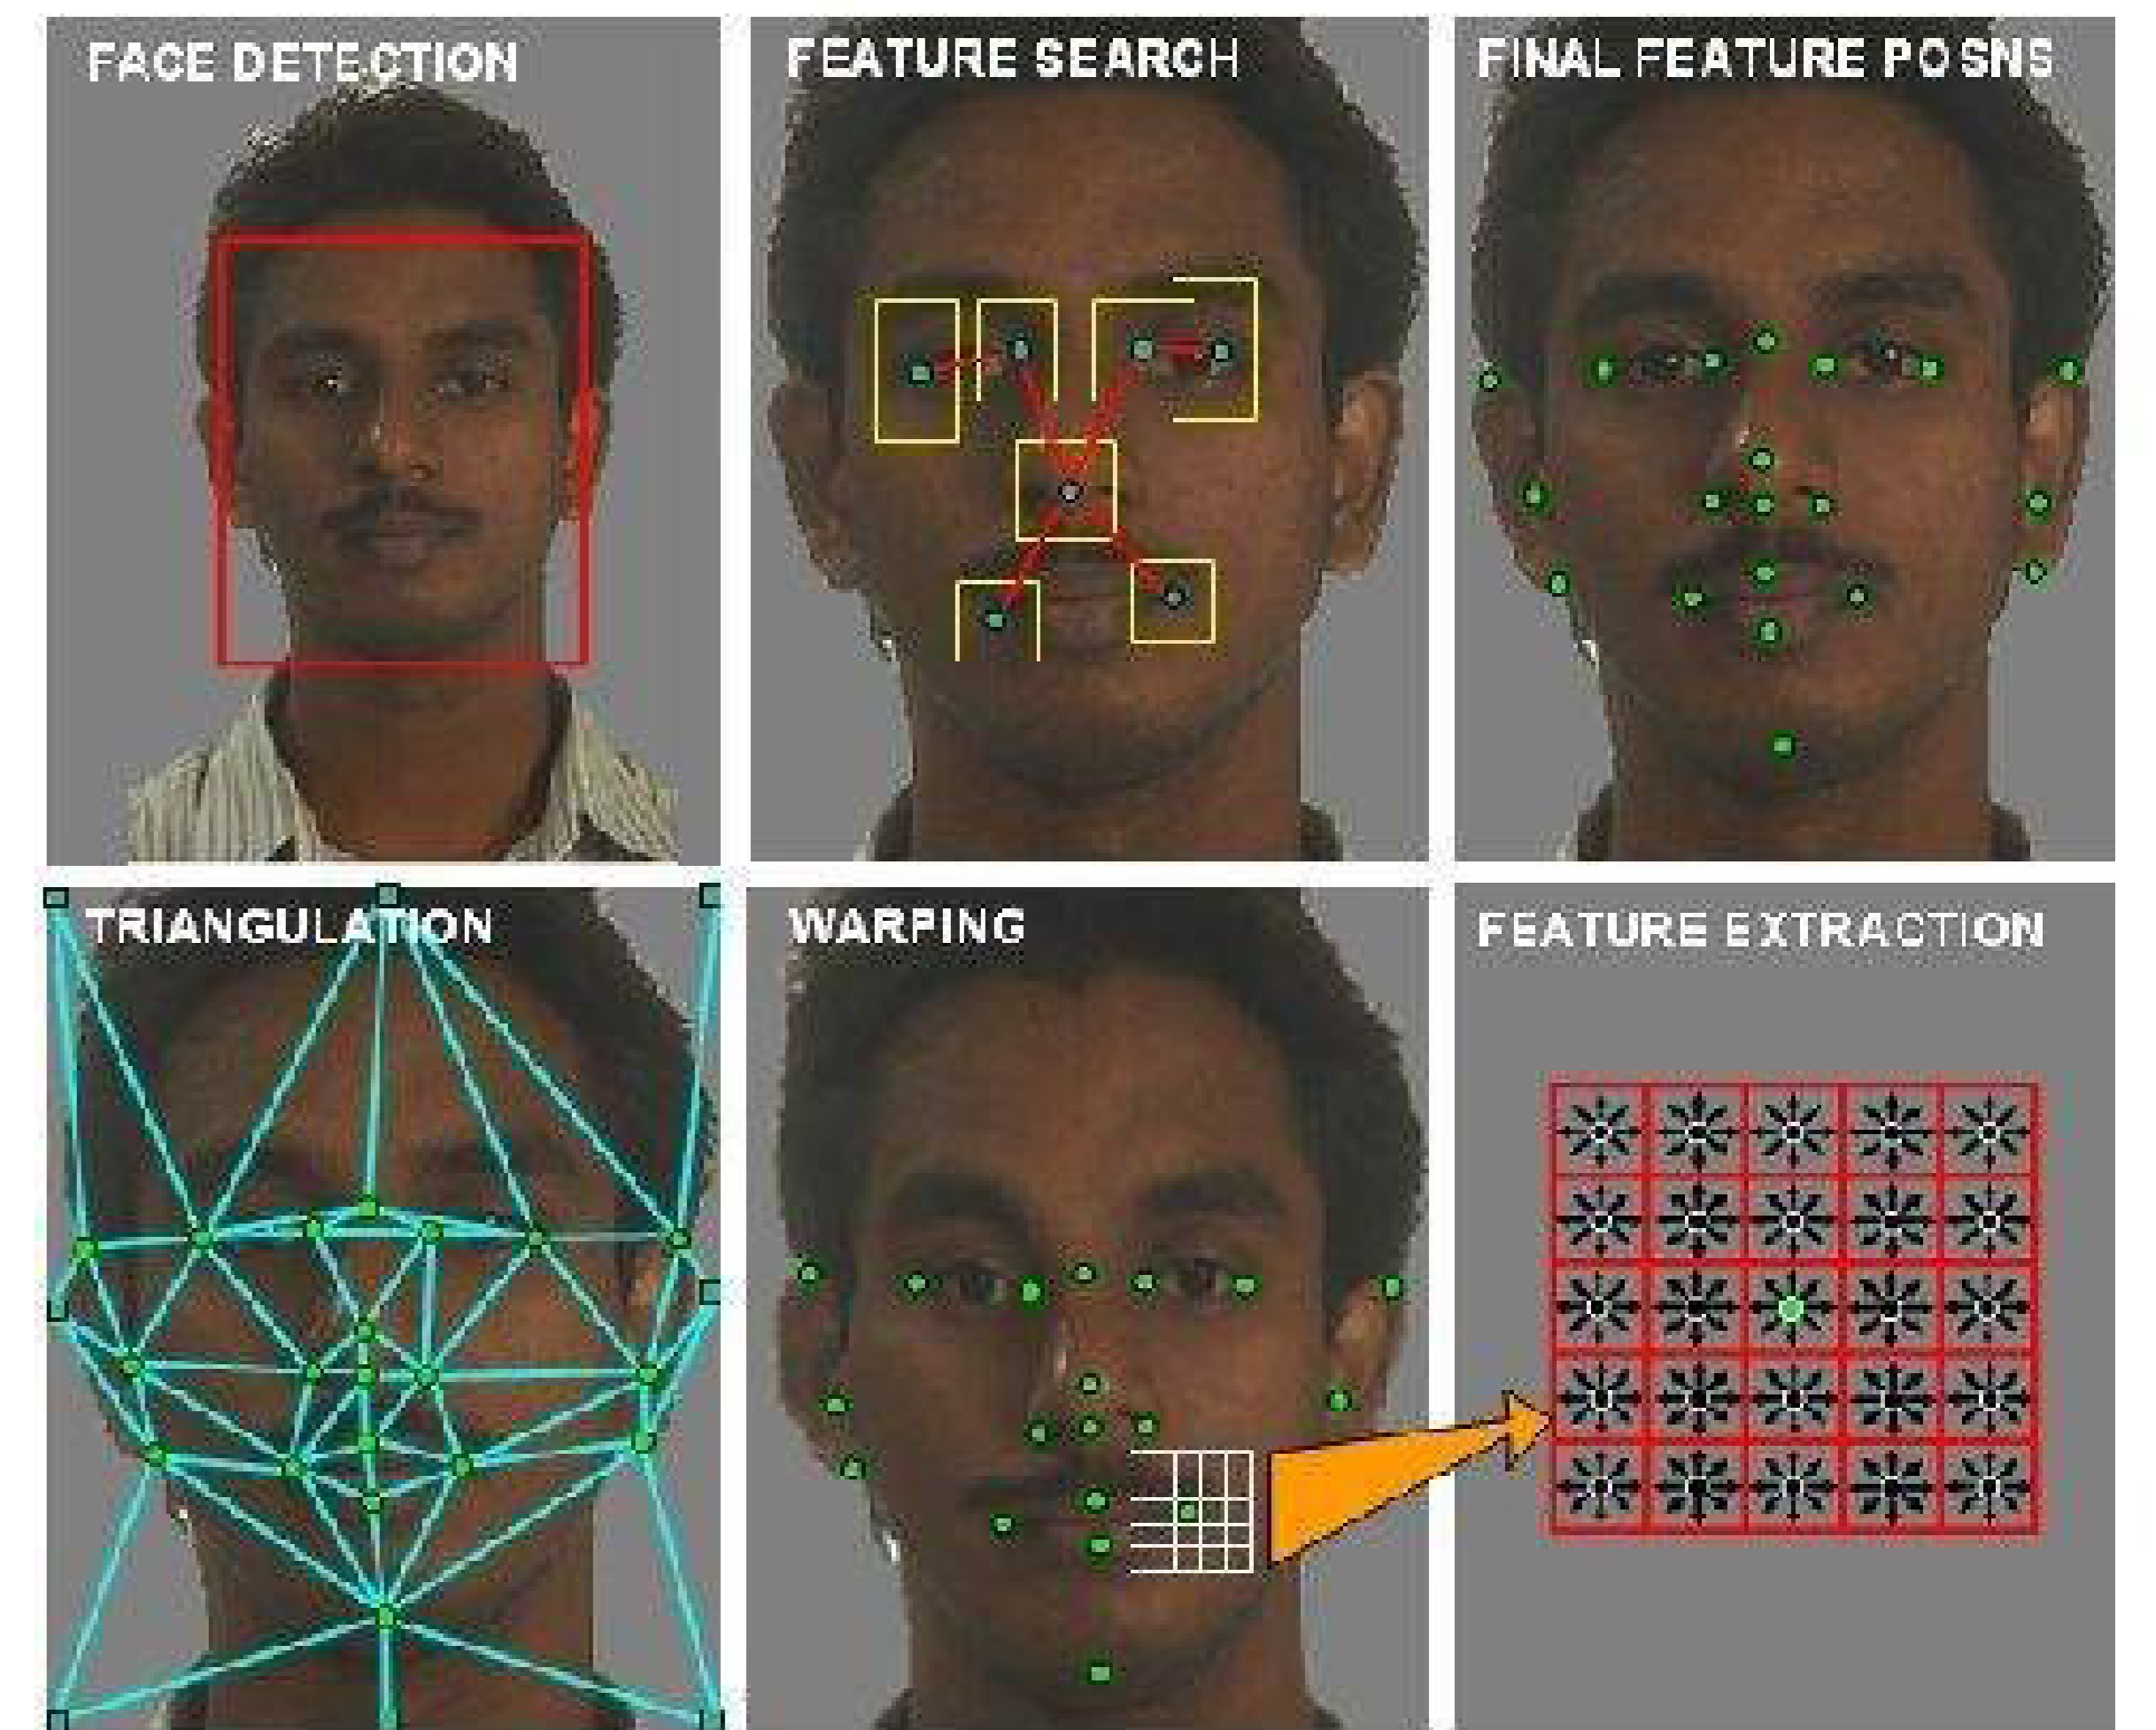

Our new way will make the world feel calm yet empty. Without the struggle or mysteries of the human mind, we will forget what it feels like to truly connect with people and ourselves. Coded consciousness will promise peace but that will also mean the loss of creativity, big emotions and authenticity. Our humanity will achieve intense order but at the cost of its soul.

SCENARIO 2

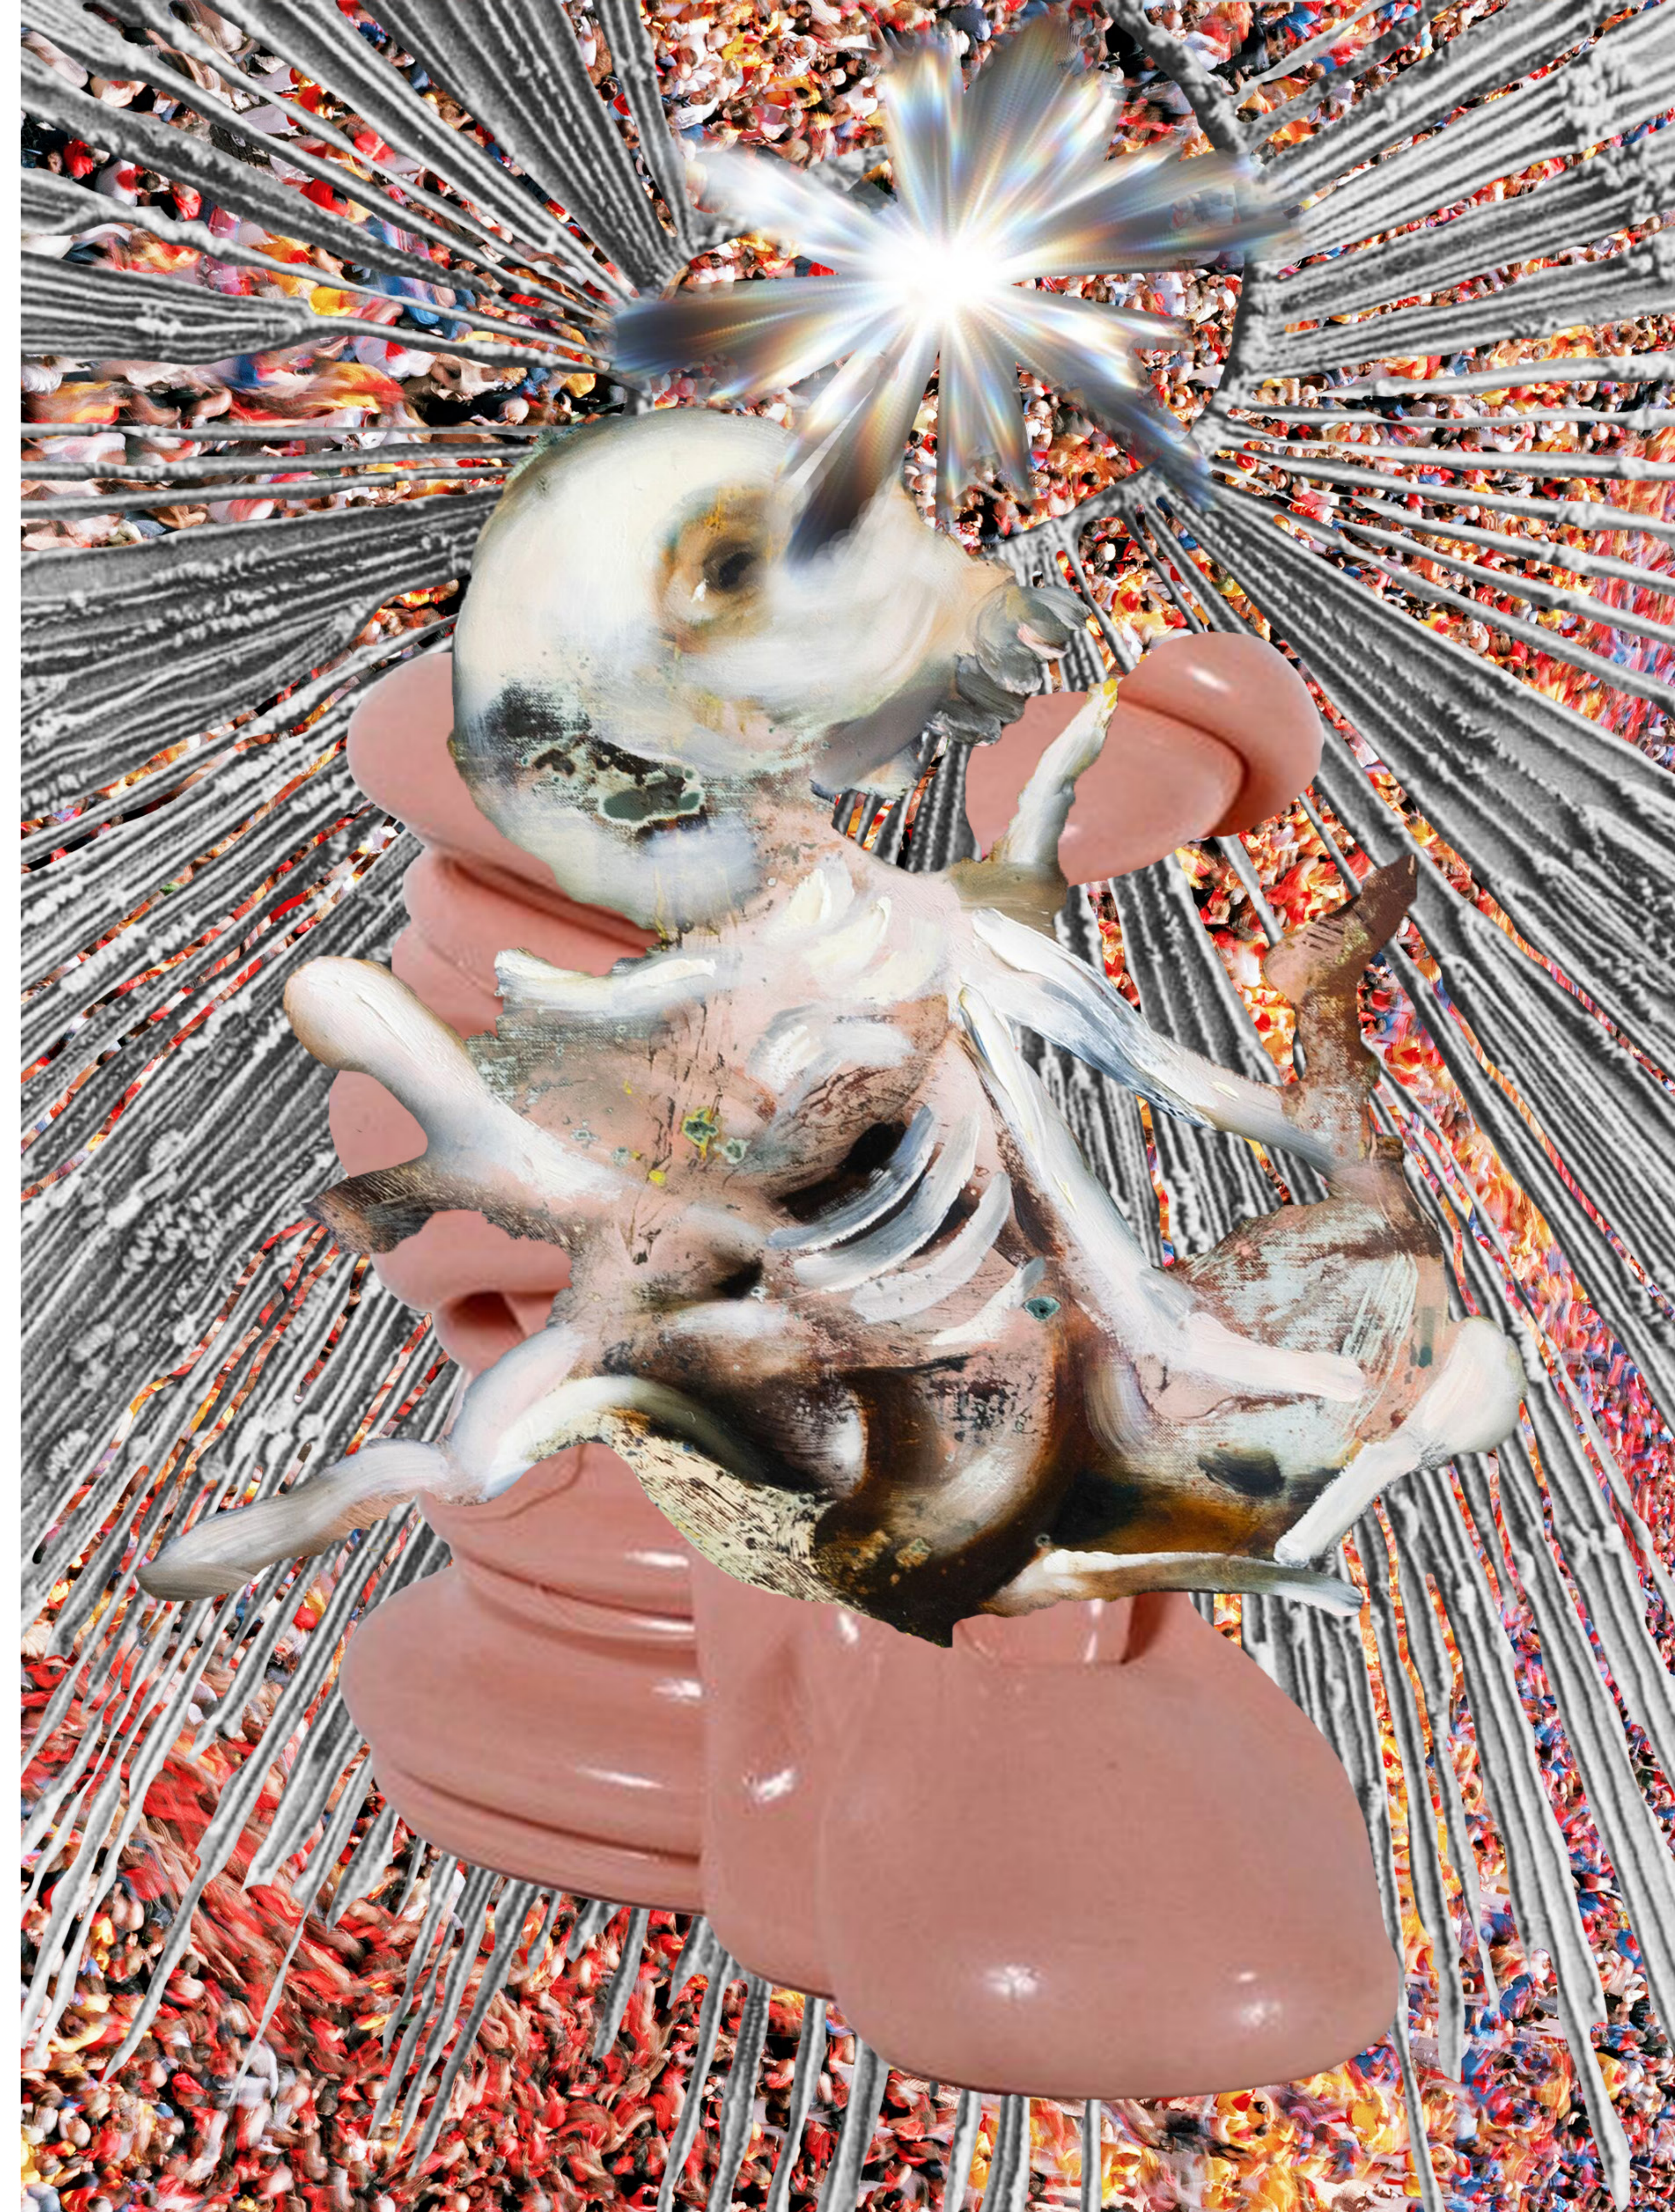

'Connected consciousness'

In this future scenario, by 2040 the world will have reached a state of consciousness that connects all of us. Through a collapse of control, our boundaries between minds, data and emotions will merge into a big network. Almost a superorganism that is built from constant interaction online, endless scrolling and the collective noise we hear. Every thought will go through millions of others until no one can tell where it began.

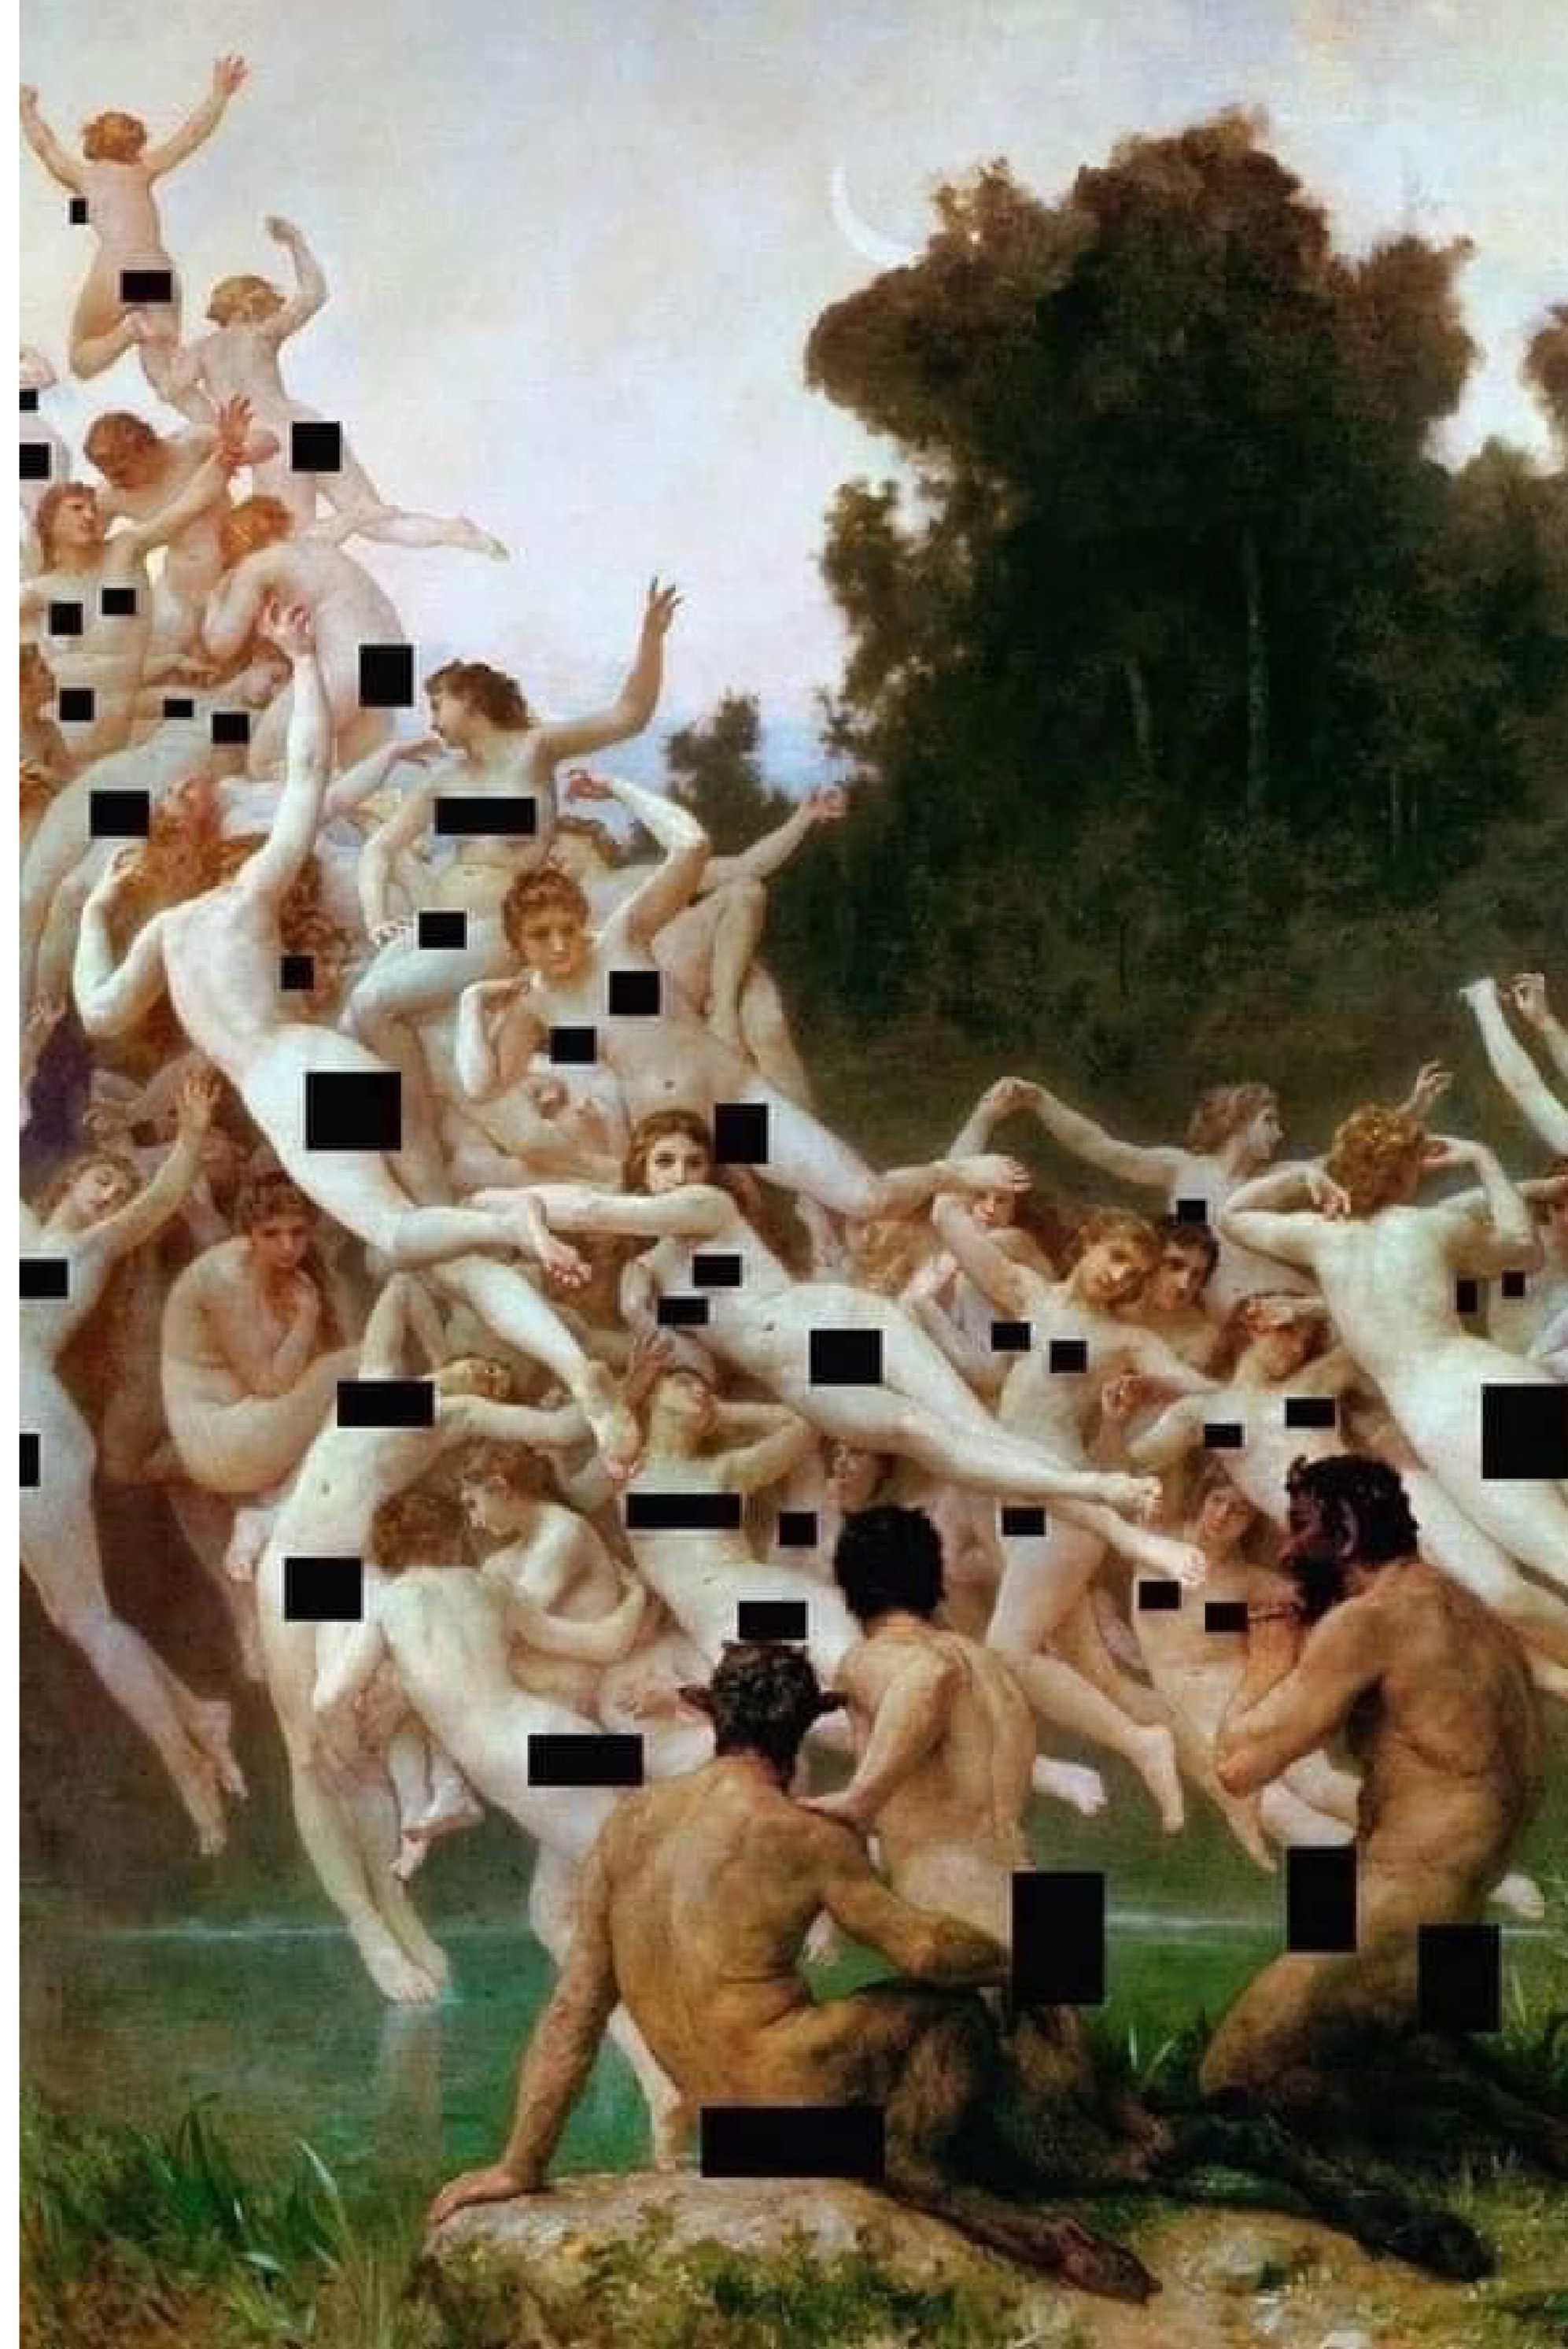

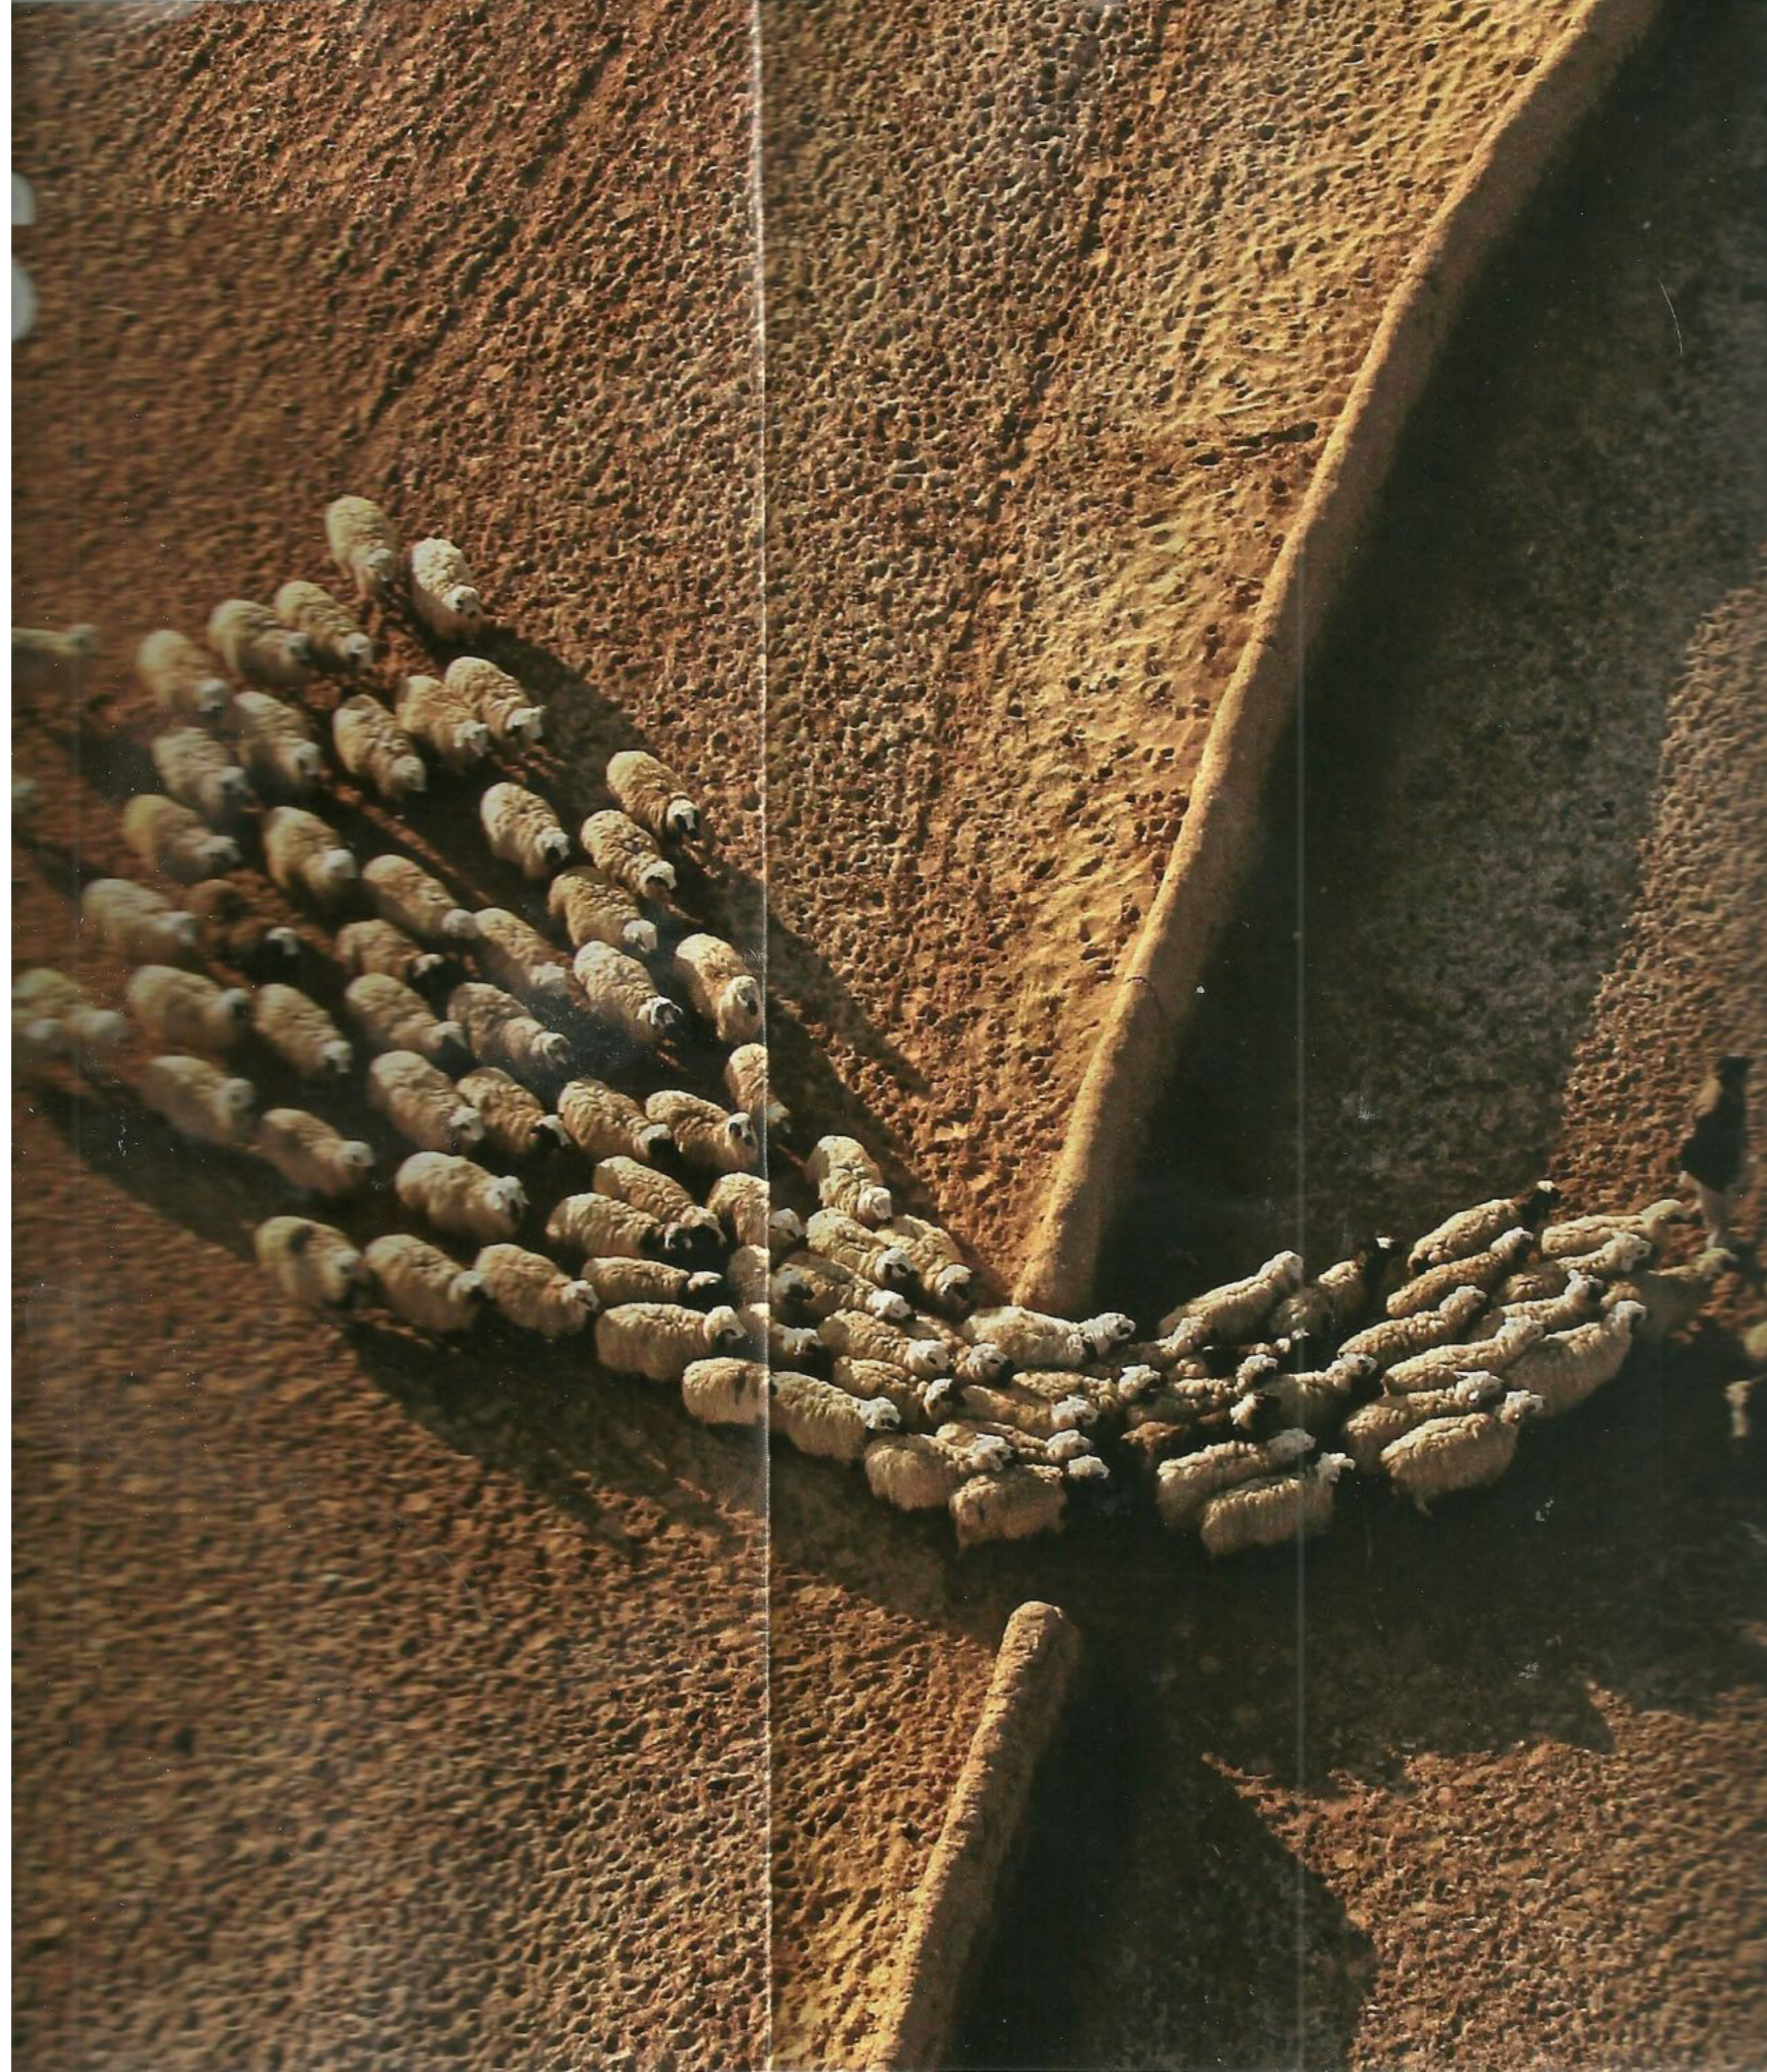

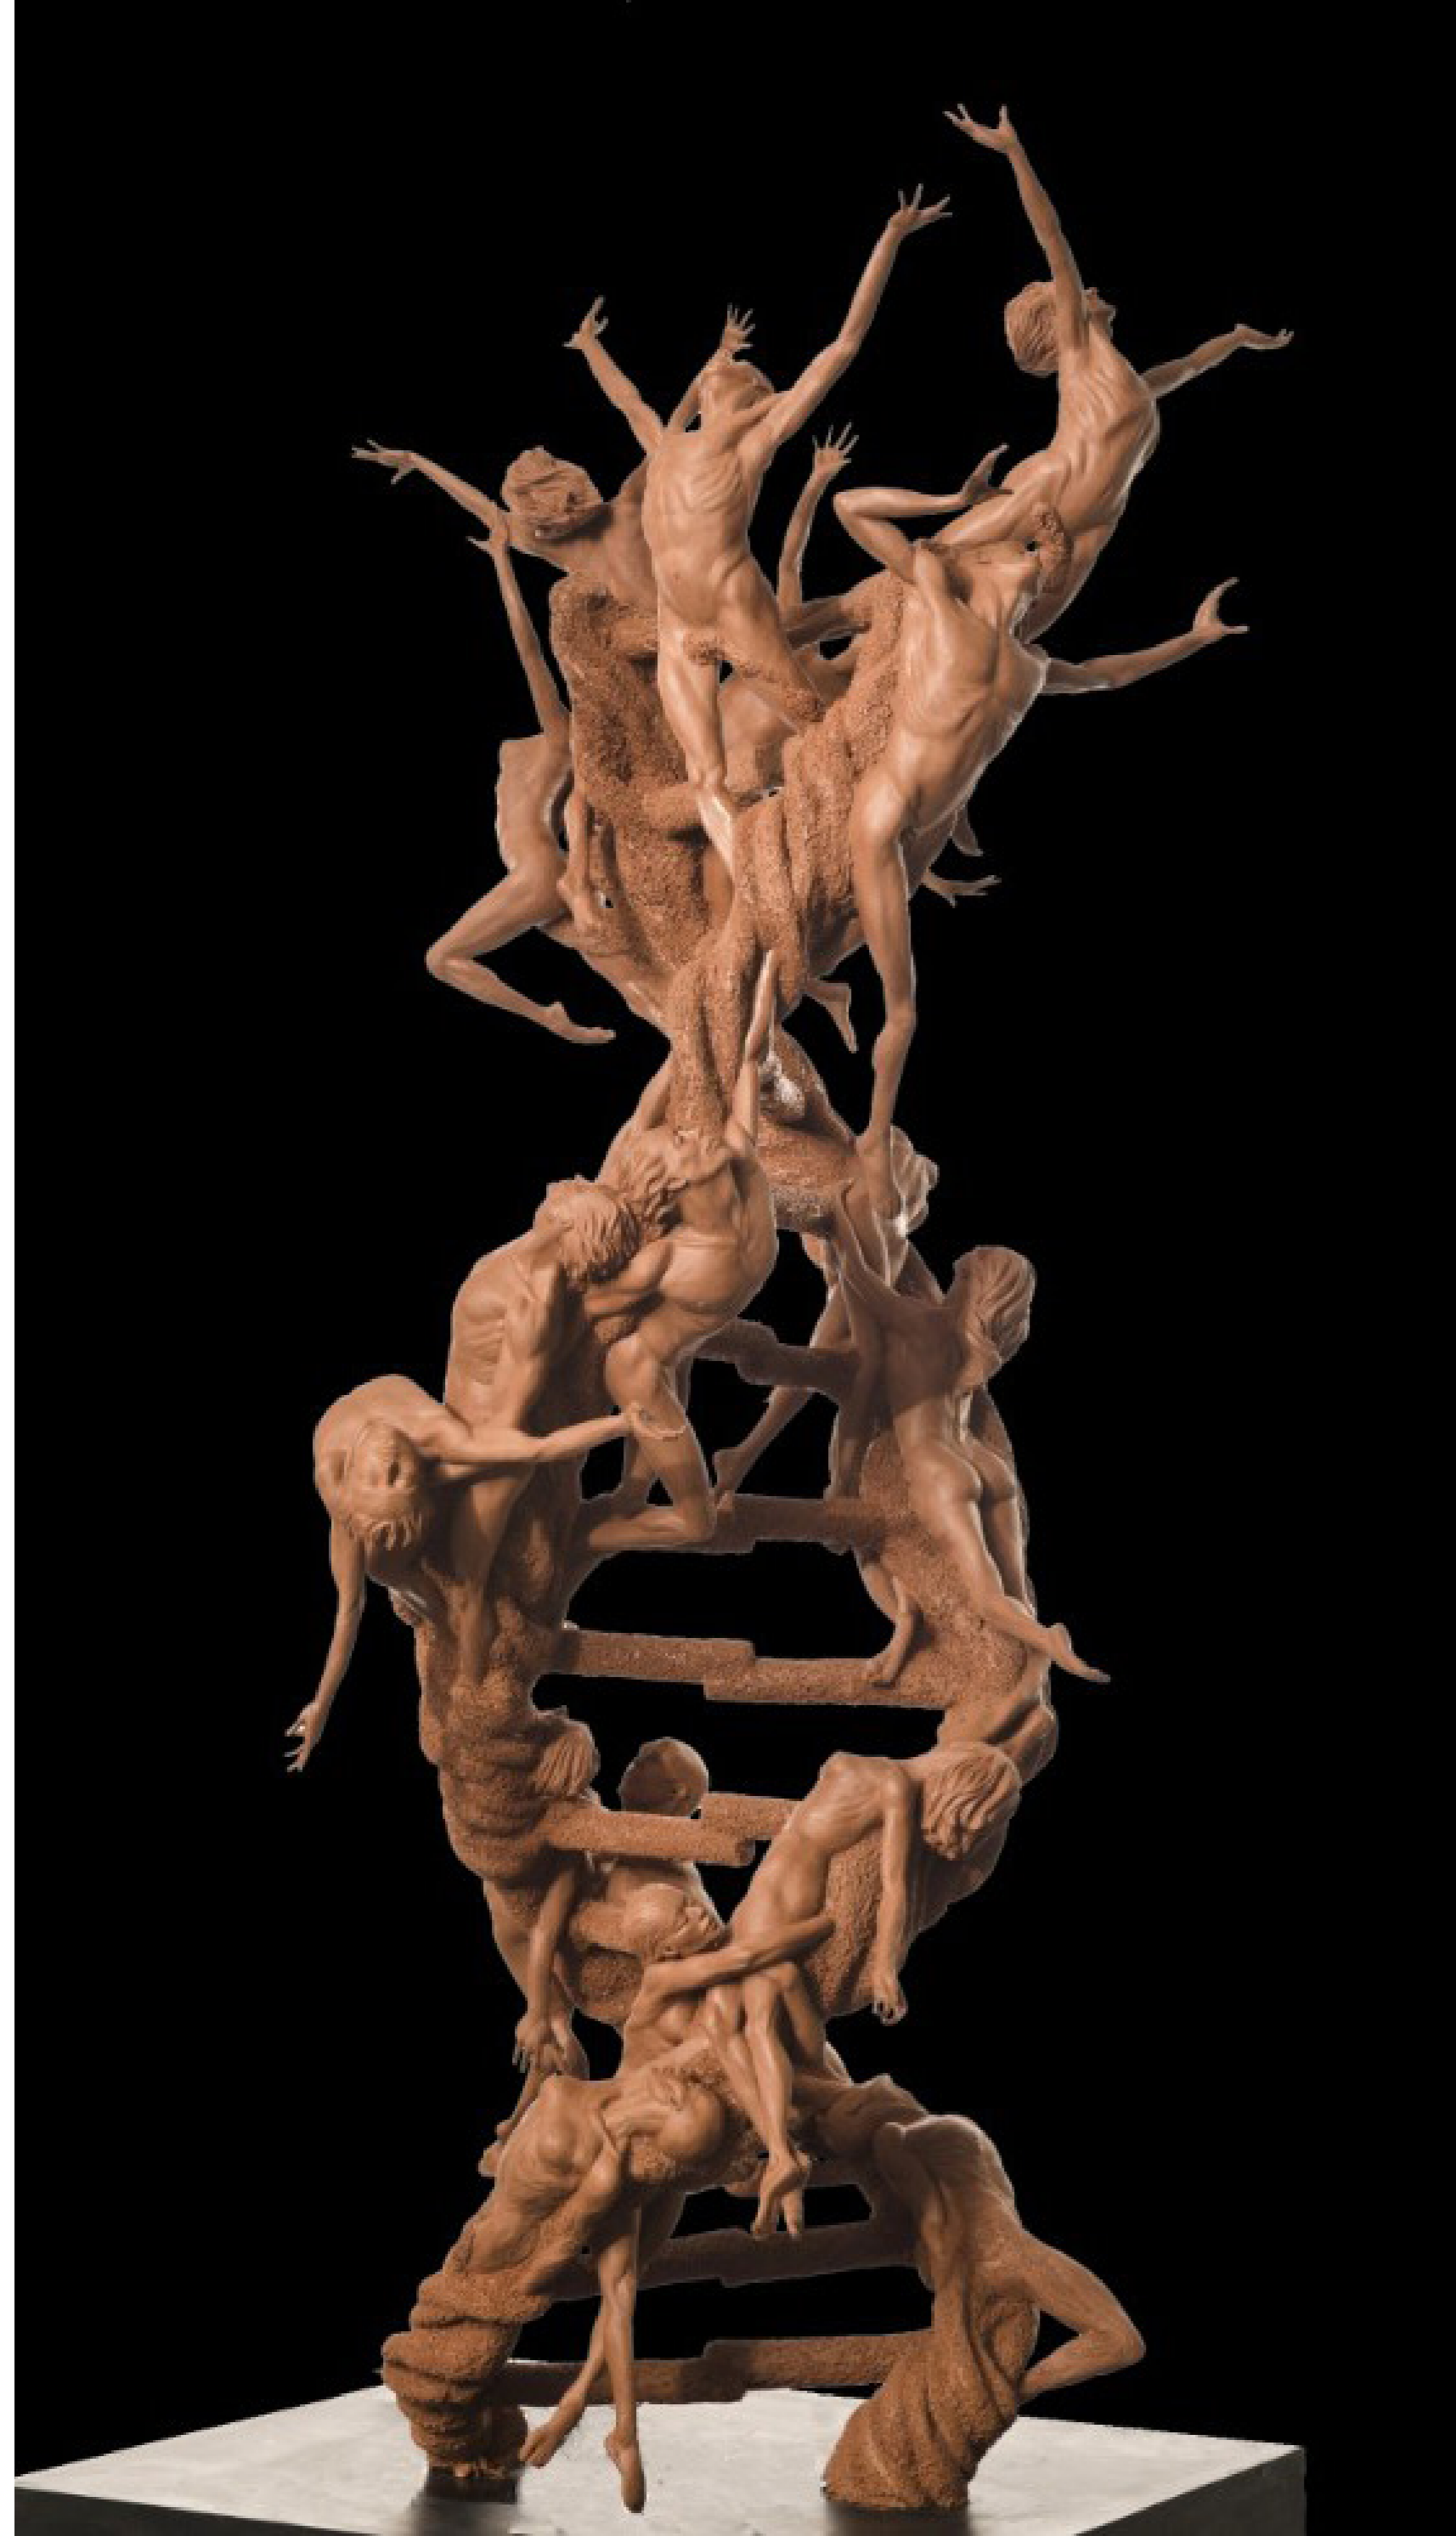

This melting of both the physical as the digital world will make individuality impossible. A sense of self is lost through all the reactions and emotional distortion of others. The system that promised us connection is now actually consuming us, literally. Through the speed of algorithms and efficiency of the digital age, it will make us one single, synchronized 'conscious'.

By then, we will stop questioning our belief systems because we don't have the distance to actually challenge it. Algorithms will continue to feed us what is familiar and groups will grow stronger and more disconnected to other 'clusters'. The intensity of opposites gets bigger by the size of the superorganisms.

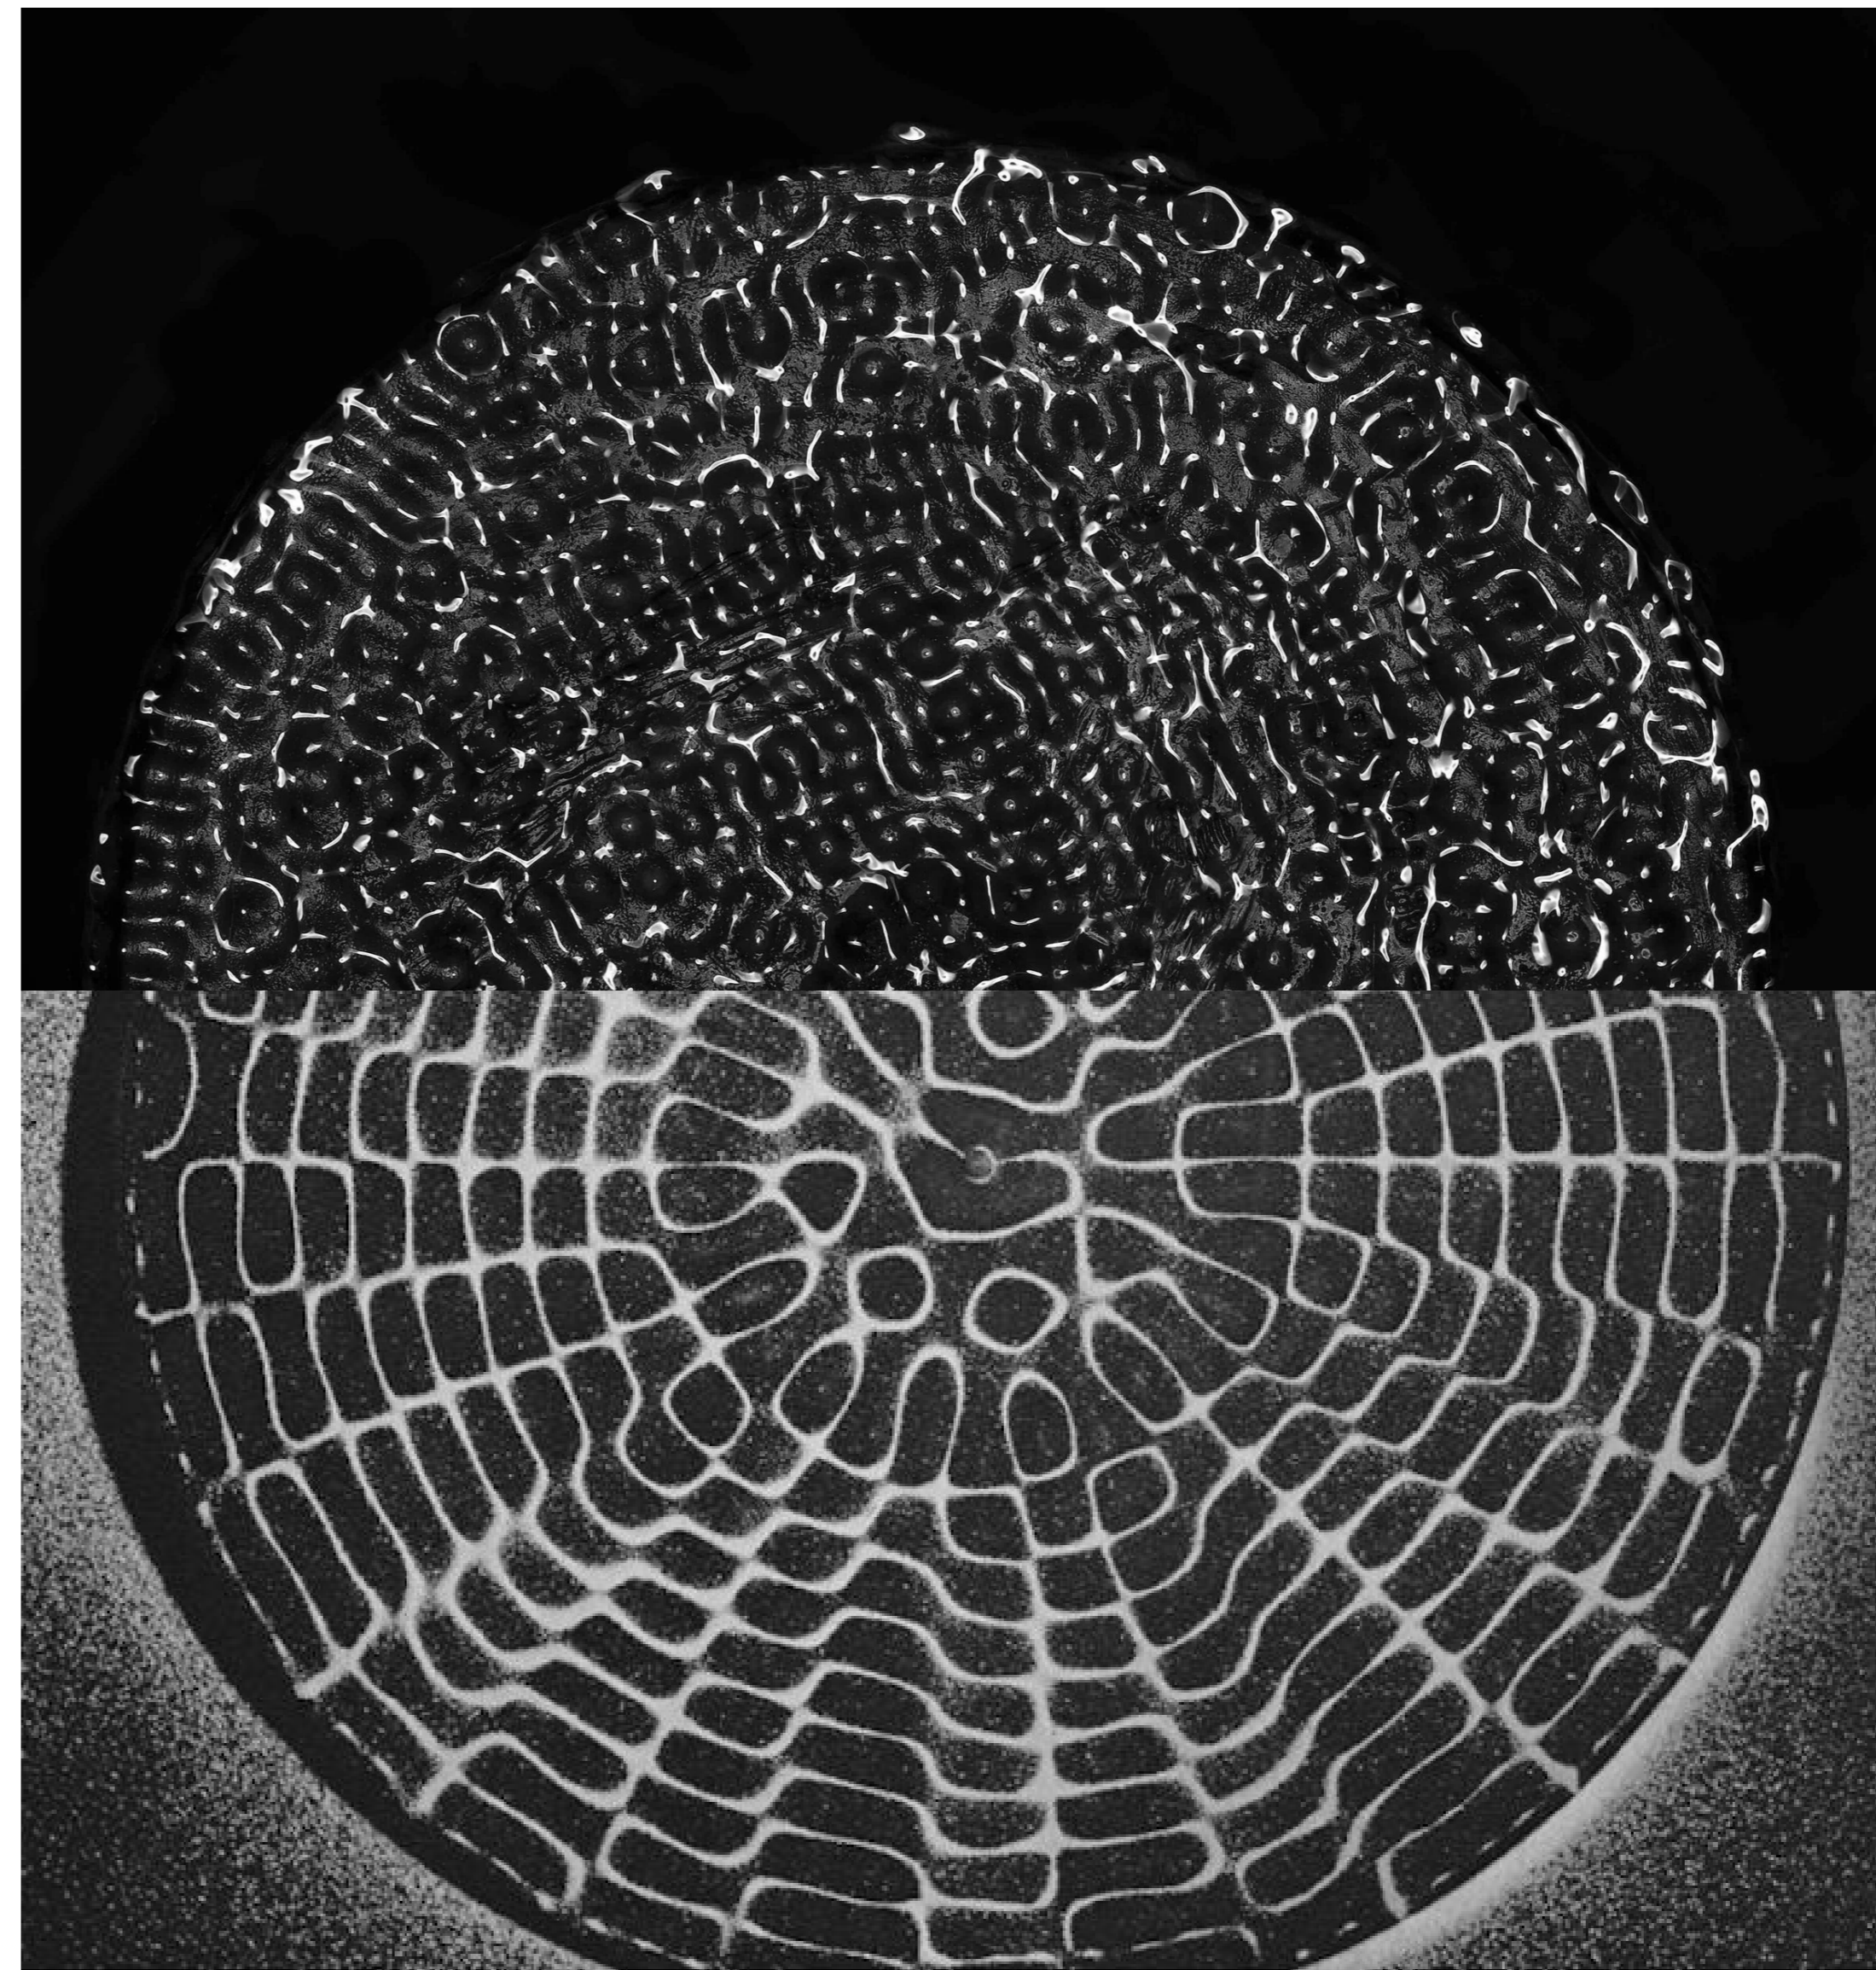

In our new state, the brutality and absurdity we see online will no longer shock us. It will be our main energy source to stay alive. The internet is not a place we willingly go on, it will be just as accessible as our own mind or in this scenario - our collective organism. The superorganism and all its once individual minds will not remember what it meant to truly be alone, every thought, emotion and belief will merge into one. 1 shared consciousness with countless separate bodies, making it a chaotic fusion of all.
